“The student can perform as a valuable team member within a complex but structured context.”

For this competence I will overall talk about the way our scrum team managed to order and present their work for each week and related and how I've been able to consistently present my work done around the project not only to my scrum team but the whole company in general.

Trello

Trello is the main way we had to make user stories and overall organise the work for each week and know what every team member was expected to do for each week, that way we could also help or know and ask about certain jobs that someone else was working at that time.

In the next page it's shown the user stories that I have made, worked on and done during the sprints, which demonstrate my ability to communicate with the other team members and in a reasonable time span for them to ask or develop my work related to them in a structured format that are trello stories.

The content of these stories will be developed further below on other learning outcomes.

Technical Design Document

Gorgons Golf Club: Technical Design Document

2

The technical Design Document was a proposal made from the Tech Lead Lorenzo that was made for the designers and programmers to have a clear place to develop parts of the game as part of mechanics that the designers would propose to the tech team and then they would try to implement it in unreal and develop a User Guide for the designers to comfortably use in the project.

As the general encounter designer, In the first sprints I worked and designed some methods and mechanics ideas that would be useful for every boss to have and for every map encounter to implement, giving complexity and profundity to the gameplay for not just being the players focusing on the boss with nothing else to do.

The next images show all the designs that I developed in the Technical Design Document, note that it was also used as a way to present the designs to other designers to see what the other teams designers were working on.

² In Appendix Folder: GCCTDDTitlePage.png

Boost Pad Behaviour [Joel]

Design Requirements

- **Boost Pad Cooldown:** Provide a base method where, on a specific zone on the map (selected previously), a cooldown will start from a range between X and Y seconds (set by the user).
 - o When the cooldown ends, the count will be kept at 0 and an effect will be assigned to the pad until the boost pad is activated.
 - o On start of the battle, all boost pads should be all in cooldown.
- **Boost Pad Activation:** Provide a base method where, on a specific zone on the map (selected previously), when a party member enters the location and the zone's cooldown is at 0, an effect will be applied to the party member that enters the zone and the pad will be on cooldown.
- **Boost Pad Effect:** Provide a base method where, on a specific zone on the map (selected previously), an effect is assigned randomly on call of this function.
 - o Since the idea is that this is more of an attribute of the pad, the base effect should be none or null, the other ones presented are between: Locked, Regen, Strength and Refresh.
 - o Note that None or Null only is applied as an effect on the pad when the pad is at cooldown, the random effects are chosen by the list above mentioned, excluding None.
- **Player Regen Effect:** Provide a base method where, on boost pad activation the effect is Regen, the player should get a buff that receives 10% of their Max hp healed every second, for the next 20 seconds.
- **Player Strength Effect:** Provide a base method where, on boost pad activation the effect is Strength, the player should get a buff that doubles the damage of all their sources of damage, for the next 20 seconds.
- **Player Refresh Effect:** Provide a base method where, on boost pad activation the effect is Refresh, the player should get a buff that at the end of their personal turn, the ability counters will lower by 2 instead of one, for their next personal 5 turns.
- **Player Lock Effect:** Provide a base method where, on boost pad activation the effect is Lock, the player should get a debuff that makes him unable to move or use abilities for the next 20 seconds.
 - o Note that, for context of this effect, the visual indicator of the buff should be a lightly darker version of one of the others that could appear in the pool (Regen, Strength, Refresh).

Boss Attack Selector [Joel]

Design Requirements

- Provide a base method for the tool of Boss AI to be able to decide between an array of attacks which attack should be used, having different percentages of each depending of the phase or stage of the boss.
- The method should be called knowing the phase of the boss, meaning that, for example, if it comes from idle and calls to attack selector, first the code needs to recall which health has remaining and depending on it or before attacks, a boss attack selector is created for that specific situation.

Resources

-

Technical Design

Boss Push Method [Joel]

Design Requirements

- Provide a base method for the tool of Boss AI that, upon contact with the boss, the player will be sent off flying with an specific force perpendicular to where the impact is done, see the sketch for a visual representation:

- The force applied should be a value in the boss specified by the user.
- If the boss is moving to the direction where the impact has been done, the push force should be the sum of the specified force plus the speed of the boss (If the boss is moving on the opposite direction, the push force should not be reduced).

Resources

-

4 Technical Design

⁴ In Appendix Folder: GCCTDDBossAttackSelector.png, GCCTDDBossPushMethod.png

Element detect Method [Joel & Erwann]

Design Requirements

- Provide a base method to be applied to a "elemental object" position (transform) which in a range provided by the user, the object will activate the specific flag specified also by the user to the players that are on these radius, and deactivate them when they go out and no other elemental object that is in radius has the same elemental flag.
- Note that the radius should only consider the distance without considering the height (even if its at 50 meters difference from y axis the effect should work, this measure is considered since generally the arenas tend to be without any different floors of height.)
- These elemental flags are:
 - o **Water**
 - o **Fire**
 - o **Light**
 - o **Nature**

5

Invincibility Boss State [Joel]

Design Requirements

- Provide a base method for the tool of Boss AI to be able to give the boss a margin specified by time where the Boss is invulnerable to all attacks.
- In this method, the boss should still be able to have collision, meaning attacks would not phase through him, but rather deal him zero damage, this also accounts for players flinging themselves to the boss, they should be able to ricochet and, if a player has a contact damaging move, should not be able to damage it neither.

⁵ In Appendix Folder: GCCTDDElementDetectMethod.png

⁶ In Appendix Folder: GCCTDDInvincibilityBossState.png

Revival Shrine Concept [Joel & Kaj]

Design Requirements

- Provide a base element in the game that on creation generates a Revival Shrine on a specific zone of the map.
- This shrine will be available when certain conditions are met:
 - o **Cooldown:** The shrine will have a specific cooldown between revival and revival, you only can revive one member at a time, the cooldown time should be able to be specified by the user. The cooldown will only start **going down when a player is downed**, meaning that at the start of the game the shrine will be with max cooldown and will only start going down when a player is dead, when the cooldown ends, the players will be able to revive the ally and then the cooldown will reset. Only going down if another member is down and so on.
 - ~~o **Damage:** When a player is down, the remaining players will have to deal a specific damage to the boss to activate the shrine, this damage counter will be specified on some part of the hud (could be close to the health of the downed ally) and could be also modified by the user that creates the shrine. //SCRAPPED FOR NOW~~
 - o **Obstacle:** The shrine, on being active by cooldown and damage, will present an obstacle that the players will need to pass by precision (for example a windmill, a loop, a barn...) if one of the players passes through in one shot, the player is revived. Some examples below:

- Concept: The shrine building should be open inside the better but also has to be visually a shrine.

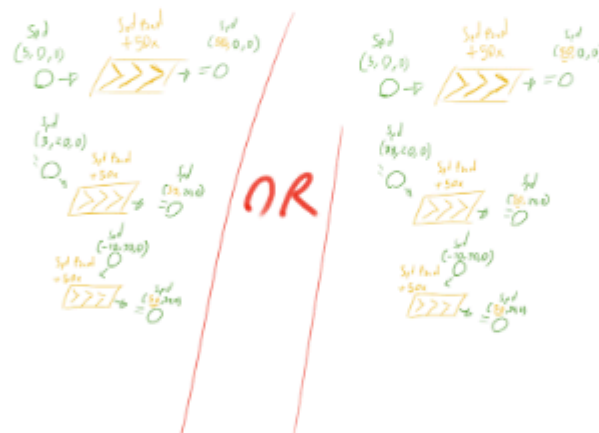

- The player, when revived, should be spawned at the top of the shrine, giving a clean shot with height to reposition back in the fight.
- (Not specific for tech) The teams can change the array of obstacles that are in each map (that can spawn randomly) and also their own artists can make reskins to fit the visual theme of each arena.
- **NOTE:** This is subject to change since i'll propose the idea to the department for polishing the idea.

7

Speed Panel [Joel & Erwann]

Design Requirements

- Provide a game element which, when placed on the map, covers a certain area where the golf balls, on contact, will get a speed boost in a certain direction that the panel is aligned to.
 - o This means that it is important to consider the direction where the player enters the speedpad, if the player enters with a velocity similar to the trajectory of the speed panel, the total velocity will be summed, however if the player enters the panel with a velocity that is opposite to the panel direction, the speed will be fixedly changed to the speed the panel gives (if the proposal is hard to implement, we could always make that the speed panel just changes the player specific speed value to a fixed Vector3). See the image below for a visual representation:

- o The speed the panel on contact with a player calls a function that changes the player's speed to a fixed (or not) value, the value of which the speed is changed (the vector itself) should be available to the users to change in the element itself.

⁷ In Appendix Folder: GCCTDDRevivalShrineConcept.png, GCCTDDRevivalShrineConcept2.png

- Inspired by the mario kart speed panel, generally it should work similar to it but i think with the specifications given it should work, you're free to change the way the speed is given if it works to change the momentum correctly to the player though.

8

Teleport Pad [Joel & Erwann]

Design Requirements

- Provide a base element called Teleport pad that, when the pad is active, the player that enters in contact with it will be teleported to another location in the arena (teleport exit specified by the user).
- The Teleport pad will have a cooldown that when it reaches 0, will be active for a specific amount of turn and then it will close again, note that if the player uses the teleport pad, the cooldown of closing will be reset, as such as if the players don't use the teleport.

9

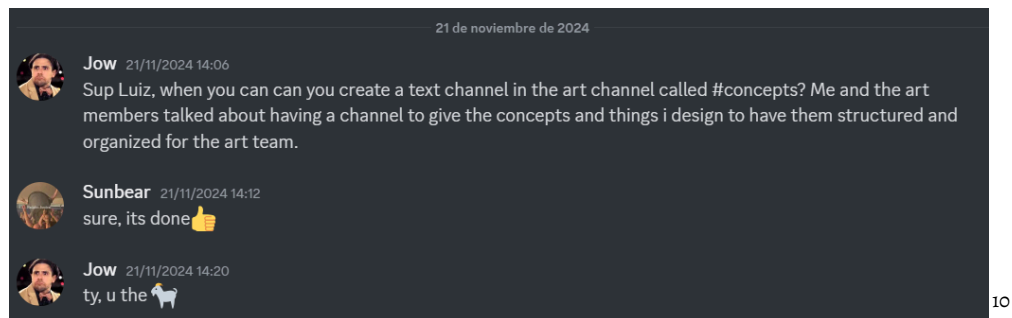

Note that in some of the Mechanics there is a “Co-Designer” Such as Erwann or Kaj, but they are the programmers that developed the mechanics in unreal and then set the resources and user stories after making them, all evidence presented is the work that i’ve done in the mechanic.

⁸ In Appendix Folder: GCCTDDSpeedPanel1.png, GCCTDDSpeedPanel2.png

⁹ In Appendix Folder: GCCTDDTeleportPad.png

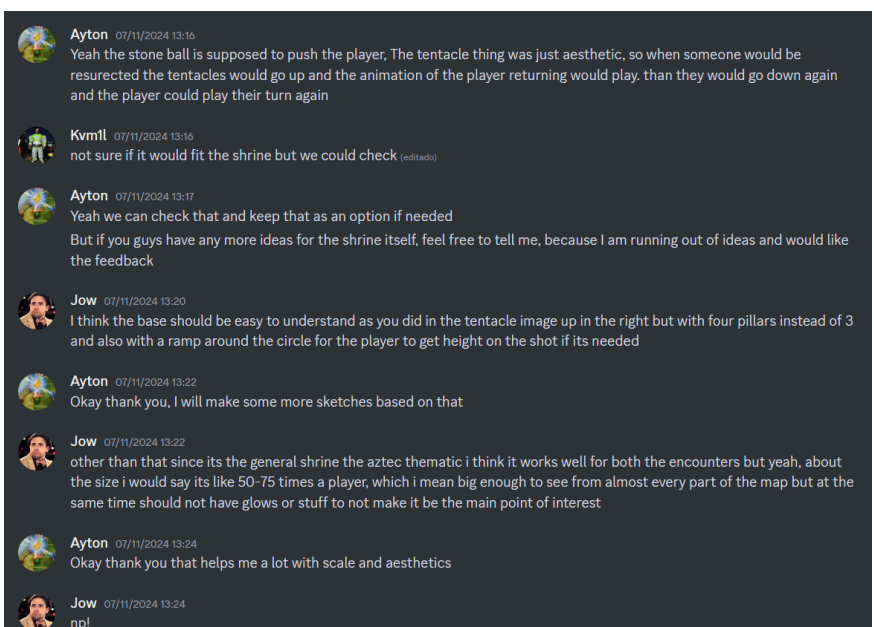

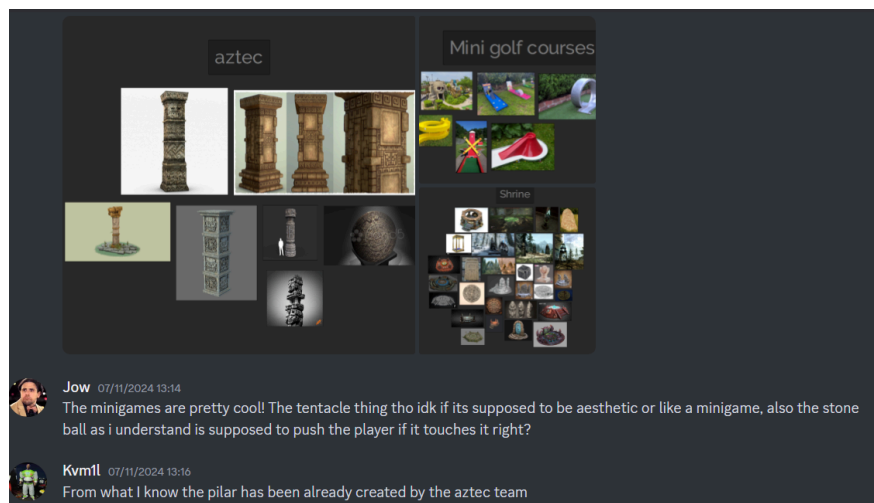

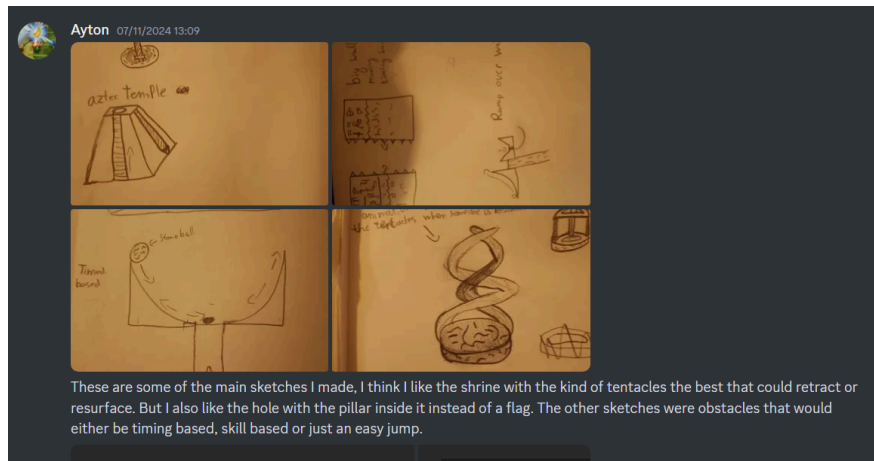

Discord

Generally Discord has been the main place to directly discuss and talk about the work done aside from Scrum in-person meetings as is the platform almost all the other colleagues are active. We made a Discord Server for our Scrum team to address general topics about the project, principally i used the platform to give feedback or receive, which will be also further developed in the A1 competence, however, I noticed that the earlier Technical Design Document, as useful as it was for the design and tech department, was not being accessed that much by the art department (at least from my scrum team) so i proposed to our Scrum Leader a creation of a concept channel where i would summarize some of the technical designs to the artists that worked on the models to describe the idea visually and the effects that were needed.

On the next page, I'll show some of the screenshots that I took talking with team members, such as Lorenzo, Erwann, Kamil, Ayton and other members from other teams (such as storm) to further demonstrate my overall activity in the Discord.

“The student can experiment with new technological trends, and can model a realisable solution in professional products or processes.”

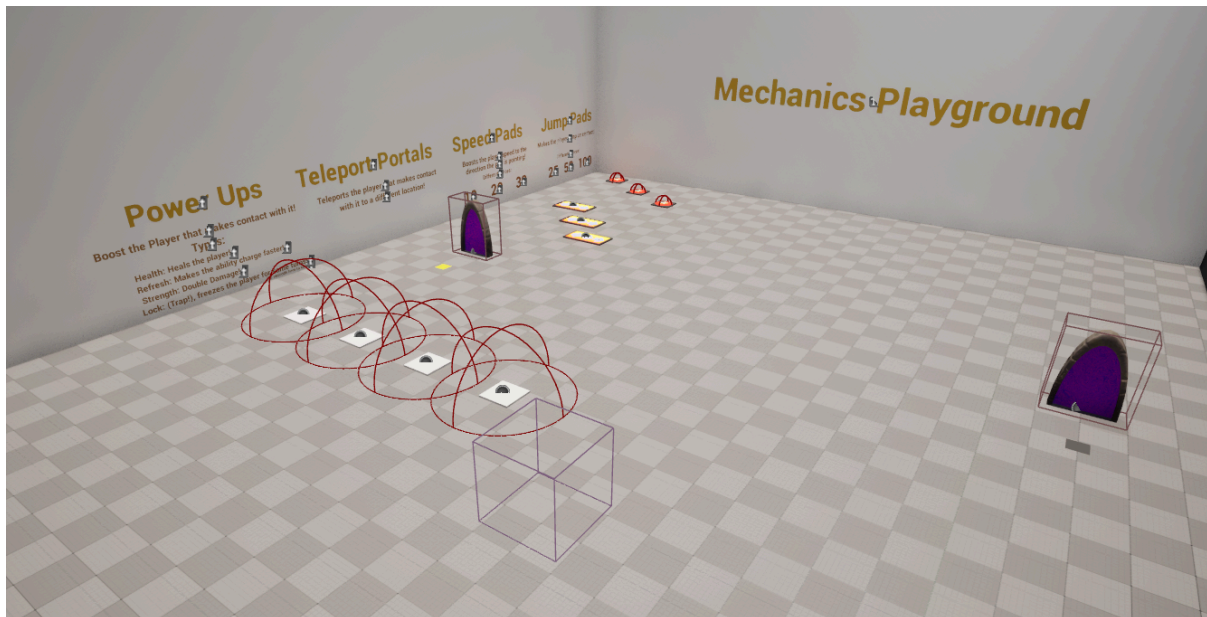

Unreal

For experimentation of new technological trends I mainly worked on my Unreal skills since it was my first time even doing a project in Unreal, and even if i didn't directly have to code in Unreal since i was a Designer, i took some tutorials from the web and found similarities on some elemental things such as how blueprints work, the change between scenes, applying materials, etc. Some of the resources are linked below:

- <https://dev.epicgames.com/documentation/en-us/unreal-engine/unreal-engine-for-unity-developers>
-  How To Use A Trigger Box In Unreal Engine 5
-  What is an Enum / Enumerator and how do you use it? | Unreal Engine...
-  Full WALL RUN TUTORIAL for Unreal Engine 5
- <https://dev.epicgames.com/documentation/en-us/unreal-engine/API/ClassHierarchy>
-  Jump Pad / Launch Platform - Unreal Engine 5 Tutorial
-  Lighting in Unreal Engine 5 | Beginner Tutorial

And last but not least the tutorial to make the project started, version compatibility and more, which is required to actually start running the project (Made by Storm).

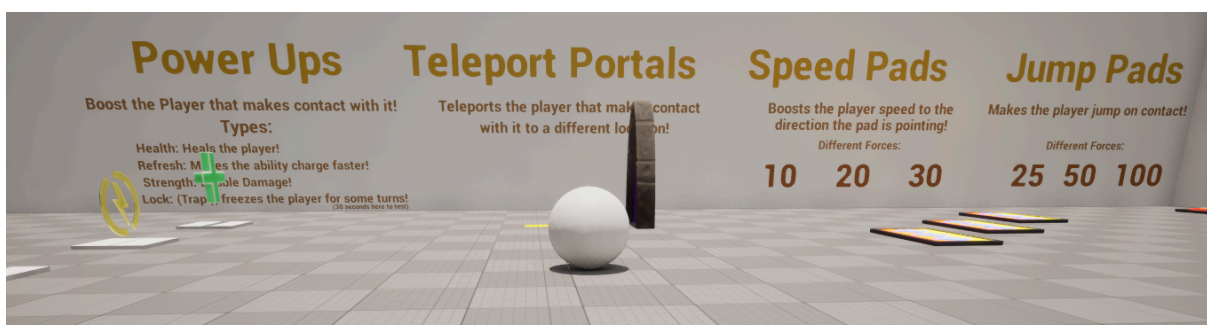

- https://www.youtube.com/watch?v=cP-S_SCyXG8

Definitive version of the Lobby¹⁷

Mika on the last 2 sprints asked me to work on the lobby for making it more like a playground test before starting the encounters, not a direct tutorial but rather a place to know all the general mechanics that were going to appear in every encounter to heighten the depth of the gameplay. Sadly this wasn't implemented in the last version to maintain the things simple and make sure that everything worked in the prototype, even if the mechanics couldn't be seen.

In the final Lobby there are 4 mechanics that were going to be introduced in every level:

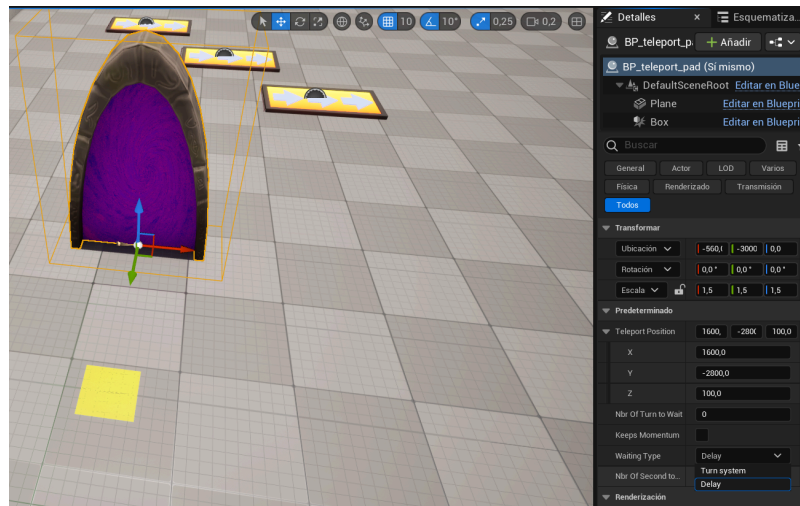

Each Mechanic And Description¹⁸

¹⁷ In Appendix Folder: 14-01-24ScreenshotAfterAllWorkMechanicsPlayground.png

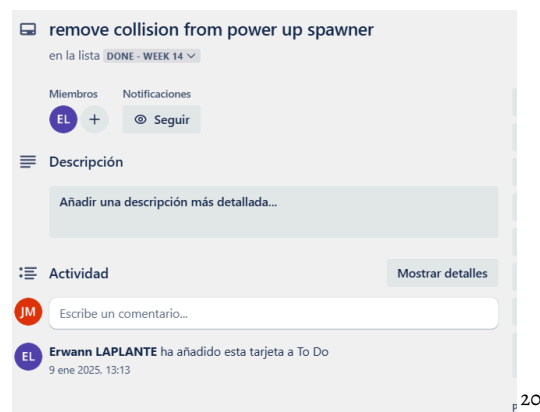

¹⁸ In Appendix Folder: 14-01-24MechanicsDescription.png

The principal problem that making the lobby gave us was that the system of how it worked was different to how the general game operates, in the lobby there is no turn system and, in that regard, no turn cooldown. That made some of the mechanics that were turn related (like the teleport that opened on certain turns or the power ups, which spawned every 5) unable to work and i had to ask Erwann to make a version of them in the blueprints to work even without the turn system, such are the range values of the teleport and PowerUp pad.

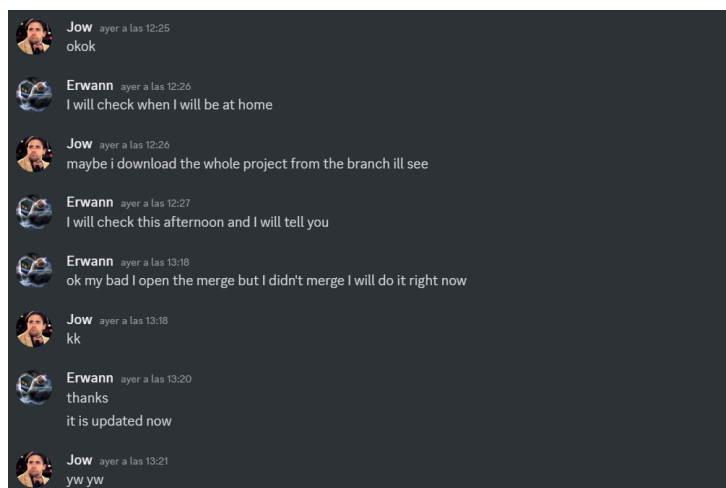

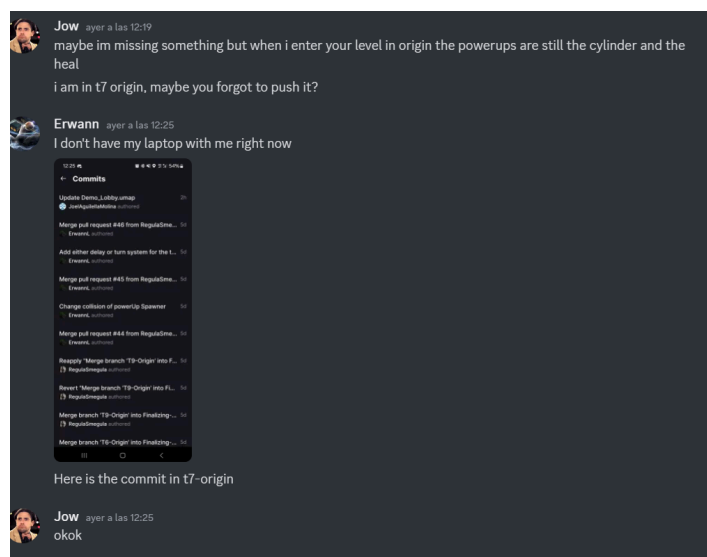

Waiting type between Turn System and Delay¹⁹

After it I also had to mention to Erwann since he was the one working with the PowerUp Spawner that the models of the Lock and Strength weren't appearing correctly and also the base of the platforms had hitbox, making the players to jump off when trying to get a powerup, where they shouldn't have to.

¹⁹ In Appendix Folder: 9-01-25AskErwannToMakeTheTeleporterNotTurnBasedForTutorial.png

²⁰ In Appendix Folder: 09-01-25littleBugFixFromPlatformAskedToFix.png

Asking Erwann to apply the Models to the Power Ups²¹

²¹ In Appendix Folder: 14-01-25AskingErwannIfModelsAreApplied,2,3.png

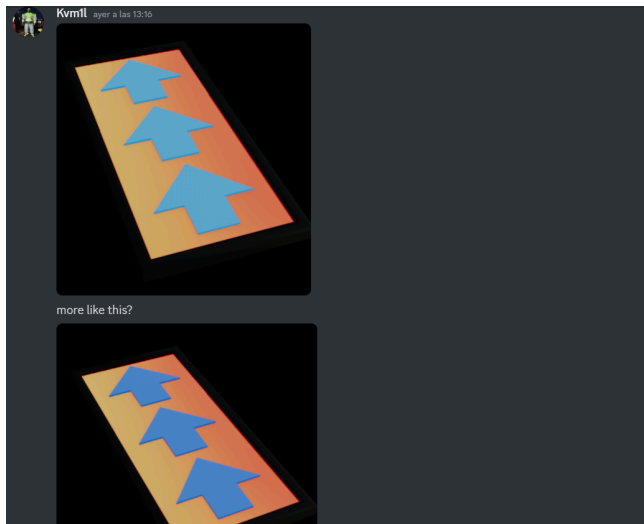

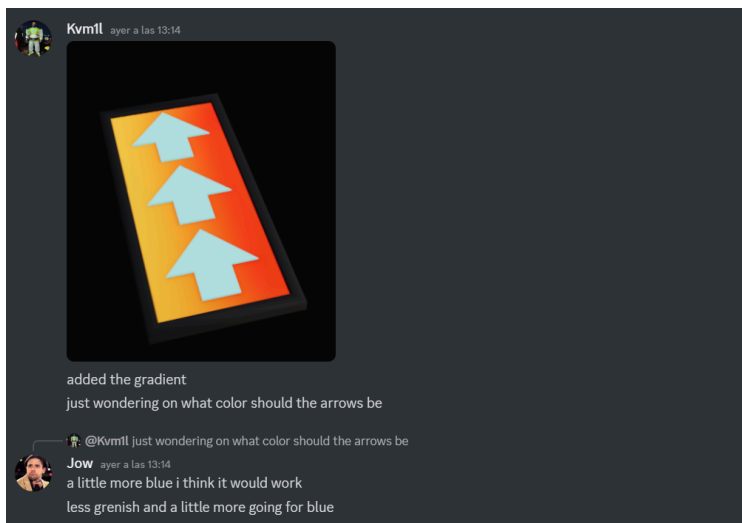

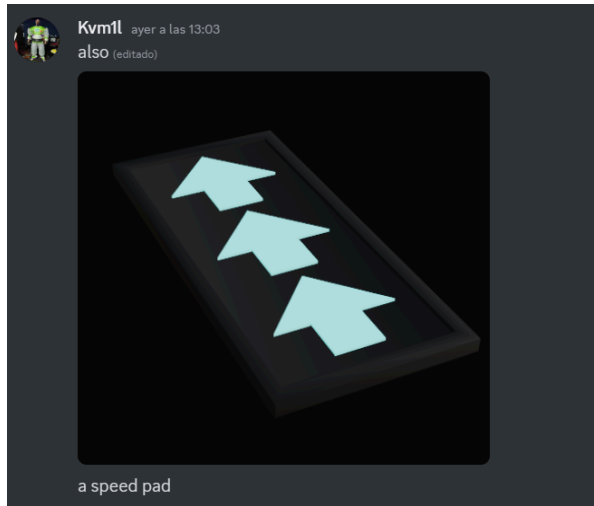

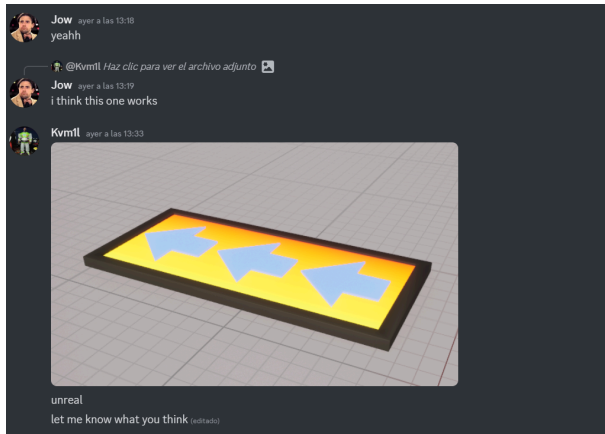

Functional Power Ups In-Game²²

After testing everything worked i needed to apply new models to the jump pad, speed pad and teleport pad that weren't present in the game already, so i asked Ayton and Kamil, that were the two companions that were modeling the mechanics to send me the files when they were done or upload them to a branch on github, after they had done it, I rearranged their size and direction and applied them on the blueprints of the said mechanics.

We also have to note that, since the early week before the sprint we needed to wrap it up, I proposed a redesign for some of the models to be quick, simple but effective and visually informative.

13 de diciembre de 2024

Kvm1l 13/12/2024 19:18

hey man quick question

I know that the lock should be grey

but then I thought that maybe yellow could fit more into the color palette of other powerups?

let me know what you think about that

Kvm1l 13/12/2024 21:51

also one more thing

I tried to work on the jumping pad

but then I realized that it need to be on the ground surface no? In order for the ball to be able to touch it

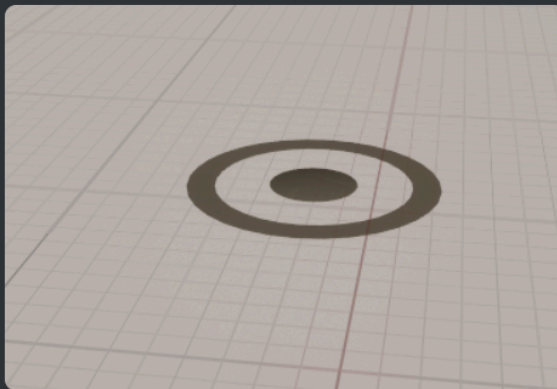

Kvm1l 13/12/2024 21:59

it need to be laying on the ground otherwise the player will just bump into the edges of the object

since it cannot jump

my idea would be something like this

so the ball can just push itself into that direction and jump

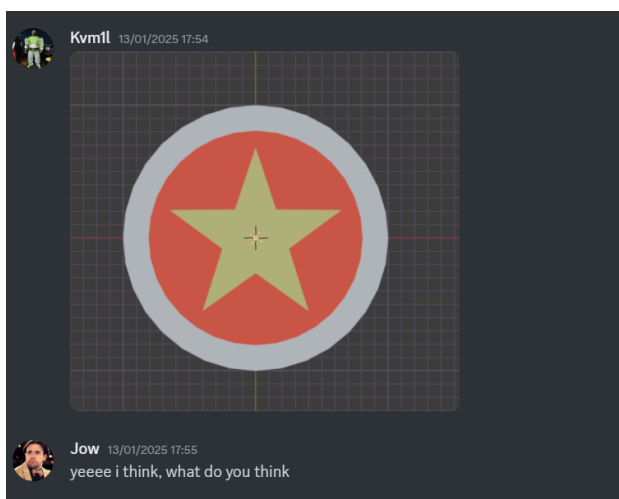

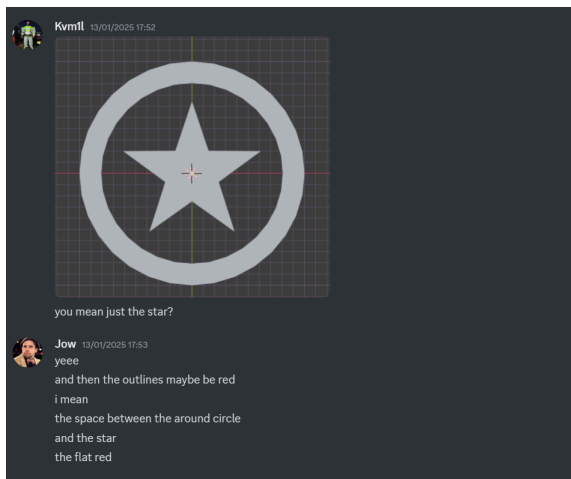

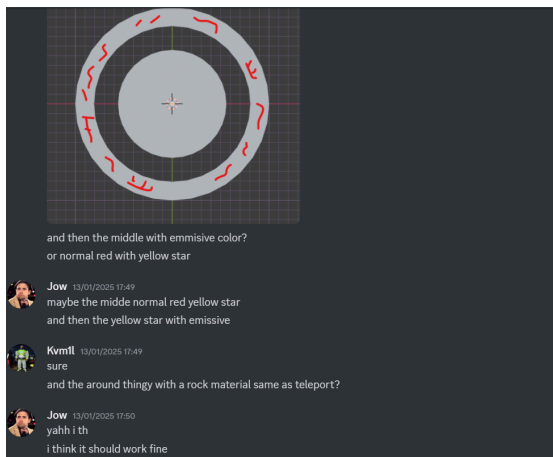

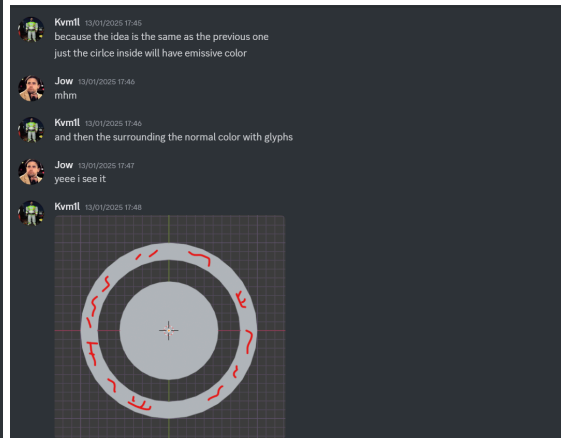

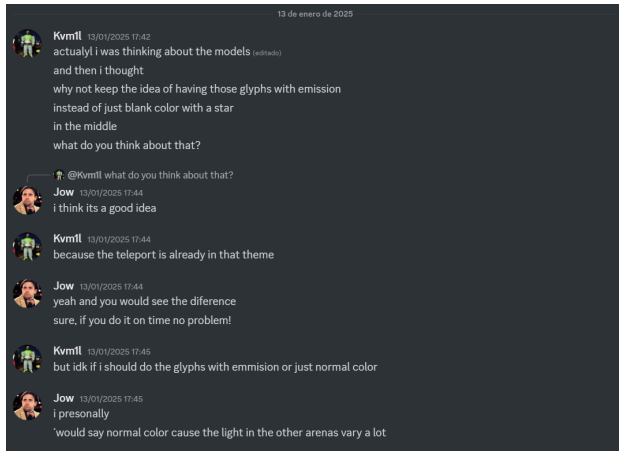

it would have emissive color

similar to powerups

let me know what you think about that

24

²⁴ In Appendix Folders: 13-12-24DiscussionForHowTheJumpPadShouldLookWithKamil,2.png, video is 13-12-24AnimationIdeaKamilSpring.mp4

Kvmtl 13/01/2025 17:55
jsut need to do the glyphs now
also so the height doesnt matter ?
for the ball
its automatically gets pushed up it it touches it right?

Jow 13/01/2025 17:56
yep
exactly

Kvmtl 13/01/2025 17:56
okle
thx

Jow 13/01/2025 17:56
np

Kvmtl 13/01/2025 18:39
ok actually can do glyphs on this one

Jow 13/01/2025 19:10
nice

Kvmtl 13/01/2025 19:10
oh sorry i meant i cant (editside)

Jow 13/01/2025 19:10
oo its ok

Kvmtl 13/01/2025 19:10
trying to make the star fit the theme

Kvmtl 13/01/2025 19:55

changed the idea a bit
since the previous one didnt work much
the star it yellow emmision but the substance fucks up idk why
or we keep it simple

or we keep it simple

Jow 13/01/2025 19:58
yee
this also works fine

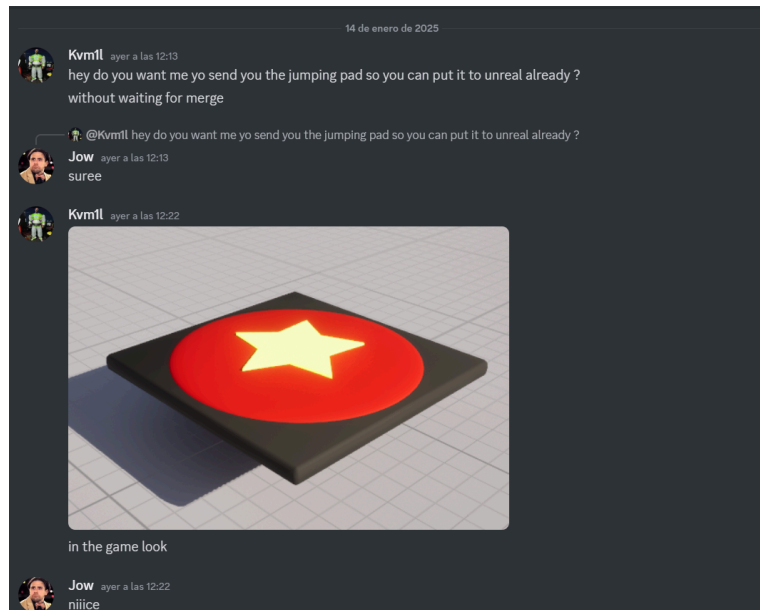

Kvmtl 13/01/2025 19:59
which one do you think will fit better

Jow 13/01/2025 19:59
second i think

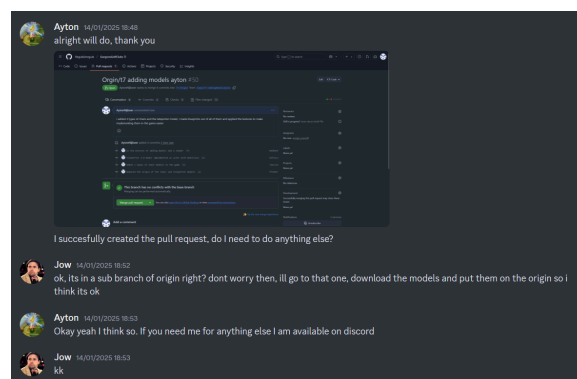

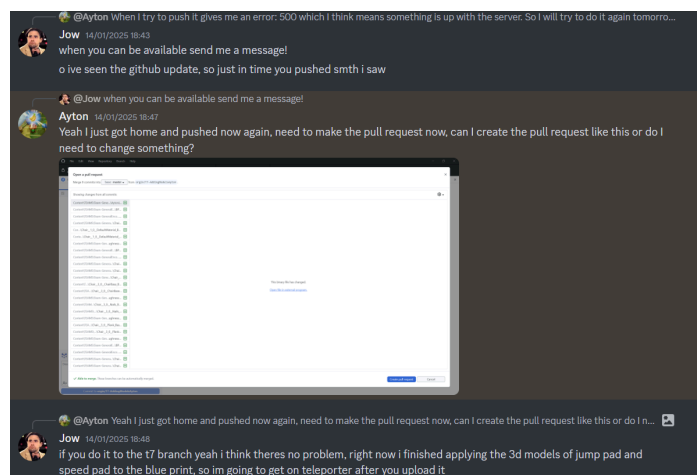

Kvmtl 13/01/2025 19:59
oke

Addition of Mechanics In Unreal²⁹

After that I wrote the specifications for the players of what each mechanic does, put them in a way to test different kinds of powers or effects and finished the lobby. Which highly improved my Unreal working experience as a whole.

²⁹ In Appendix Folder: 13-01-24AdditionToBlueprintJumpPad.png, 13-01-24AdditionToBlueprintTeleportPad.png, 13-01-24AdditionToBlueprintSpeedPad.png

Github

Indirectly, Having to work with the project introduced me to the concept of branching in github, since generally i haven't done it on previous works since only one group of coordinated people was working on the project, here i had to move between T7-Origin and T7-subbranches to get certain models and make them work in the origin (such as earlier showed with Ayton and Kamil), I even created a sub-branch called T7-TPLobbyDoesntWork for the problems with the teleport being turn based and other tests, here are some of the activity and updates I did on my branch:

WhiteBoard

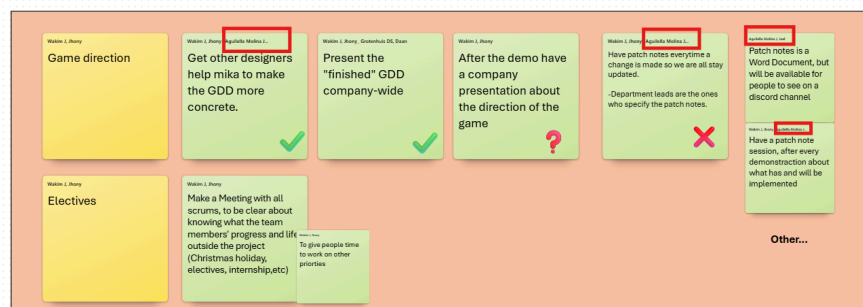

I never used WhiteBoard before this project and when the “detecting the problems of the company” moment came in i was starting to test how more or less worked the stickers and other elements, here are some evidence of me assessing information and using WhiteBoard as a way to communicate with others.

Suggestion about how we could present the work done for each sprint³¹

Note for going in the Game Direction Problems meeting to propose solutions³²

Notes made by me (or co-authoring) some ideas to make the people feel aware of the current state of other teams and departments work³³

³¹ In Appendix Folder: 21-11-24WhiteBoardCommentAboutHowToPresentEverySprint.png

³³ In Appendix Folder: 21-11-24StructuringAndPresentingIdeas.png

G1

“The student can identify the role that suits them, can identify the learning goals to fit this role, can identify the necessary steps to achieve these goals, and can identify improvements to this process.”

First of all, i presented the idea of, after electing The Senior Designer role, get the optional learning outcomes F2 and A1, both are explained on the next screenshot:

Hello Douwe, as for the show of the competences, the F2 learning outcome focuses about solving complex problems and providing innovative solutions which, as the designer in the scrum team of general encounters, i will have to create the base ideas and creations regarding multiple arena mechanics not specifically designed for any boss, but more like general mechanics that all the arenas would have (such as mini events to regain health, mana, damage multipliers...) And other hazards which in general would be concepts that give a solution on how can we make the arena more lively and complex.

About the A1 learning outcome that focuses on taking different perspectives about a problems and propose design requirements to that solution, as a designer i'll be constantly in contact with my department and share my developments and ideas about the project and my specific part of general encounters, so that my companions can suggest about changes or opinions about the work that i can modify. And viceversa, i'll try to be a useful asset to my colleagues that show their progress and designs by giving tips and feedback when its needed and give ideas relevant to the topic used.

Thank you for the reminder!

Optional Learning Outcomes chosen³⁴

While this whole document is an evidence itself of me describing my own development and work about my role in the project, i also improved a lot my communication skills, specifically being very fluid talking english as a main language was an experience i never experienced yet and it felt more and more comfortable as longer the project went, I also learned a lot from Unreal Engine ([Unreal](#)) thanks to all the tutorials and all the help that my scrum team tech people managed to give me,

³⁴ In Appendix Folder: 25-09-24Learning Agreement Justification.png

specifically Erwann who has been the programmer whom i've been most in contact with and taught me a lot about blueprints and how to specifically code events in Unreal.

If you have been noticing the footer of each page there's always a note when an image is present that says its specific name in the image, i put specifically for a lot of the images the exact date when that event happened, so it wouldn't be hard to organise, but also to check how i developed my skills at the duration of the project, I wanted to put them in order to see the progress i've made but the document would've been too large.

Overall what I noticed the most when analysing it is that for the first sprints I've put a lot of work specifically on concepting a lot of things that weren't gonna be plausible in the game, and little by little by every meeting i had with the design team and my scrum i've been more practical and started actually implementing and testing things in the Unreal Project and drafting fast but specifically and with very visual information, being very much more efficient other than making the drafts or the ideas look "professional", which i feel is a thing that I have been improving a lot and will apply to future projects!

F2

“The student can experiment with innovative concepts to construct design requirements for complex problems.”

For the next two learning outcomes I've amassed a large amount of evidence so I'll be presenting it by time when it happened so the progress feels more natural after the presentation of the Technical Design Document, to feel more structured.

Technical Design Document

The Technical Design Document and all their evidence are made with the idea of solving the problem of having content and variety in the game, as the designer of the general encounter team, I proposed mechanics that the boss and the maps could have independently of its encounter 1 or encounter 2 to make the game more enticing and enjoyable while giving a complexity for the players to master and know their terrain and calculate more efficiently their moves.

Boost Pad Behaviour [Joel]

Design Requirements

- **Boost Pad Cooldown:** Provide a base method where, on a specific zone on the map (selected previously), a cooldown will start from a range between X and Y seconds (set by the user).
 - o When the cooldown ends, the count will be kept at 0 and an effect will be assigned to the pad until the boost pad is activated.
 - o On start of the battle, all boost pads should be all in cooldown.
- **Boost Pad Activation:** Provide a base method where, on a specific zone on the map (selected previously), when a party member enters the location and the zone's cooldown is at 0, an effect will be applied to the party member that enters the zone and the pad will be on cooldown.
- **Boost Pad Effect:** Provide a base method where, on a specific zone on the map (selected previously), an effect is assigned randomly on call of this function.
 - o Since the idea is that this is more of an attribute of the pad, the base effect should be none or null, the other ones presented are between: Locked, Regen, Strength and Refresh.
 - o Note that None or Null only is applied as an effect on the pad when the pad is at cooldown, the random effects are chosen by the list above mentioned, excluding None.
- **Player Regen Effect:** Provide a base method where, on boost pad activation the effect is Regen, the player should get a buff that receives 10% of their Max hp healed every second, for the next 20 seconds.
- **Player Strength Effect:** Provide a base method where, on boost pad activation the effect is Strength, the player should get a buff that doubles the damage of all their sources of damage, for the next 20 seconds.
- **Player Refresh Effect:** Provide a base method where, on boost pad activation the effect is Refresh, the player should get a buff that at the end of their personal turn, the ability counters will lower by 2 instead of one, for their next personal 5 turns.
- **Player Lock Effect:** Provide a base method where, on boost pad activation the effect is Lock, the player should get a debuff that makes him unable to move or use abilities for the next 20 seconds.
 - o Note that, for context of this effect, the visual indicator of the buff should be a lightly darker version of one of the others that could appear in the pool (Regen, Strength, Refresh).

Revival Shrine Concept [Joel & Kaj]

Design Requirements

- Provide a base element in the game that on creation generates a Revival Shrine on a specific zone of the map.
- This shrine will be available when certain conditions are met:
 - o **Cooldown:** The shrine will have a specific cooldown between revival and revival, you only can revive one member at a time, the cooldown time should be able to be specified by the user. The cooldown will only start **going down when a player is downed**, meaning that at the start of the game the shrine will be with max cooldown and will only start going down when a player is dead, when the cooldown ends, the players will be able to revive the ally and then the cooldown will reset. Only going down if another member is down and so on.
 - o ~~**Damage:** When a player is down, the remaining players will have to deal a specific damage to the boss to activate the shrine, this damage counter will be specified on some part of the hud (could be close to the health of the downed ally) and could be also modified by the user that creates the shrine.~~ //SCRAPPED FOR NOW
 - o **Obstacle:** The shrine, on being active by cooldown and damage, will present an obstacle that the players will need to pass by precision (for example a windmill, a loop, a barn...) if one of the players passes through in one shot, the player is revived. Some examples below:

- Concept: The shrine building should be open inside the better but also has to be visually a shrine.
- The player, when revived, should be spawned at the top of the shrine, giving a clean shot with height to reposition back in the fight.
- (Not specific for tech) The teams can change the array of obstacles that are in each map (that can spawn randomly) and also their own artists can make reskins to fit the visual theme of each arena.
- **NOTE:** This is subject to change since i'll propose the idea to the department for polishing the idea.

Revival Shrine that was going to be added for the purpose of reviving a fallen player when they died³⁹

³⁹ In Appendix Folder: GCCTDDRevivalShrineConcept1,2.png

Speed Panel [Joel & Erwann]

Design Requirements

- Provide a game element which, when placed on the map, covers a certain area where the golf balls, on contact, will get a speed boost in a certain direction that the panel is aligned to.
 - o This means that it is important to consider the direction where the player enters the speedpad, if the player enters with a velocity similar to the trajectory of the speed panel, the total velocity will be summed, however if the player enters the panel with a velocity that is opposite to the panel direction, the speed will be fixedly changed to the speed the panel gives (if the proposal is hard to implement, we could always make that the speed panel just changes the player specific speed value to a fixed Vector3). See the image below for a visual representation:

- o The speed the panel on contact with a player calls a function that changes the player's speed to a fixed (or not) value, the value of which the speed is changed (the vector itself) should be available to the users to change in the element itself.
- Inspired by the mario kart speed panel, generally it should work similar to it but i think with the specifications given it should work, you're free to change the way the speed is given if it works to change the momentum correctly to the player though.

Speed Panel Concept to get a boost of speed around the map so the player could expand his movement from certain places to others⁴⁰

⁴⁰ In Appendix Folder: GCCTDDSpeedPanel1,2.png

|Teleport Pad [Joel & Erwann]

Design Requirements

- Provide a base element called Teleport pad that, when the pad is active, the player that enters in contact with it will be teleported to another location in the arena (teleport exit specified by the user).
- The Teleport pad will have a cooldown that when it reaches 0, will be active for a specific amount of turn and then it will close again, note that if the player uses the teleport pad, the cooldown of closing will be reset, as such as if the players don't use the teleport.

Teleport Pad idea that would open on certain turns for crossing from place to another for better tactical positioning⁴¹

⁴¹ In Appendix Folder: GCCTDDTeleportPad1.png

Elemental Powers

Meeting when I discussed with the designer of Team Mage his passive abilities.⁴²

Elemental Powers were a passive that the Mage was going to have that on every map there would be “elemental props” that on range would give a certain buff to one of the Mage’s four abilities. After the reunion I made a quick draft of what was required that the Mage designer Michele approved.

⁴² In Appendix Folder: 24-10-24MeetingDiscussingElementalPowers

This document is made for helping with the idea of the Mage Class that every ability will be boosted if the mage uses that ability on an area where there is a prop that boosts that element, the elements are the following:

- Water
- Fire
- Light
- Nature.

As far as i understood the ideas of how would they operate would be:

- The boosts only apply when the player is in the radius (without considering height, only distance on the x/z axis) and stops when the player is out of the radius
- Same elemental props radius can overlap and do not enhance the effect, the only thing is that you need to take into account that when the player exits a radius, only deactivates the flag if it's in no other same-element radius.
- The mage can coexist in a zone where all the elements or some are existing, for example if you position yourself maybe you could activate all power flags at the same time.

Nextly i want to propose some ideas that could be worked upon as generic elemental props for each element for testing purposes or even that could work as props around the maps, note that all of these should be around the same dimensions, like just 4 times taller than a player and 3 times wider, for them to see them more or less their effect, notice (if its too big for a torch maybe from almost any angle you wont see their flame) and also to differentiate it with decorated background:

- **Holy Water Font:** Should be visually glowing for the mage class with a blue color, when he is in range of effect the mage should periodically glow with that color softly as well. Make the sound of a waterfall when in range of effect for the mage.

- **Standing Torch:** Same properties on visual effects as the holy water but red color. Sounds of flames when entering the area for mage.

- **Firefly Lantern**
- Ideally should be to use fireflies and not fire to differentiate the element itself with the fire one. Same properties on visual effects as the holy water but yellow (to orange-ish) color. Should have the sounds of light sweep similar to fairy-like referring to the fireflies inside, reference: <https://youtu.be/4DmYScv7gI?si=Uuy-2y4x6ivlj3X>

- **Flower Pot**
- Not necessary to be for flowers, could be long tall grass or trees, But overall plant-related items that are in a pot to be on-scale with the other elemental props, I recommend for our general encounter department to do the props as tall grass since it's simple to understand.
- Glow effect similar to the above, color green, the sound effect of entering the area should remember of moving around tall grass or plants, reference: <https://youtu.be/8YGimoHd9cc?si=HYtWrS3IzXMQB1tb>

Document that explains in detail the Mage Element Boosts and Props that could work visually⁴³

⁴³ 5-11-24ElementalPropsInitialConceptsForMageDesigns1,2,3,4.png

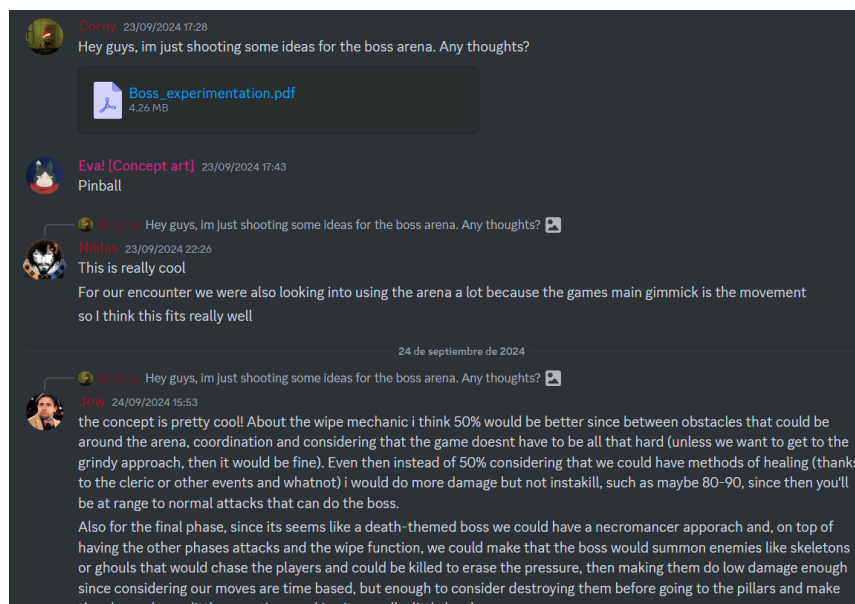

Element detect Method [Joel & Erwann]

Design Requirements

- Provide a base method to be applied to a "elemental object" position (transform) which in a range provided by the user, the object will activate the specific flag specified also by the user to the players that are on these radius, and deactivate them when they go out and no other elemental object that is in radius has the same elemental flag.
- Note that the radius should only consider the distance without considering the height (even if its at 50 meters difference from y axis the effect should work, this measure is considered since generally the arenas tend to be without any different floors of height.)
- These elemental flags are:
 - o **Water**
 - o **Fire**
 - o **Light**
 - o **Nature**

Element detect method for the unused Mage Passive Boost of the 4 abilities for activating it like a boolean⁴⁴

Proposal of Base Arena and General Gimmicks

General Encounters

The idea of the game in my opinion has a point that needs to develop in what its related to the general game loop (at least regarding the encounter). In this document i propose some ideas to give a more lively experience to the players, from having mini-games inside the game loop of the boss battle, to enemies that difficult and force the team to organize their priorities by not solely focusing in the boss on the arena.

Before starting to develop the ideas i've been drafting, take into account that, since this week we deemed the design group as an experimentation week, i'll be using **base mechanics not yet imposed** in the game that will may not be used or discarded. What i mean by this is that, if you feel that there are some base mechanics that didn't know they existed, probably is because we talked about it in our department meeting very broadly and doesn't mean that they might be principal mechanics.

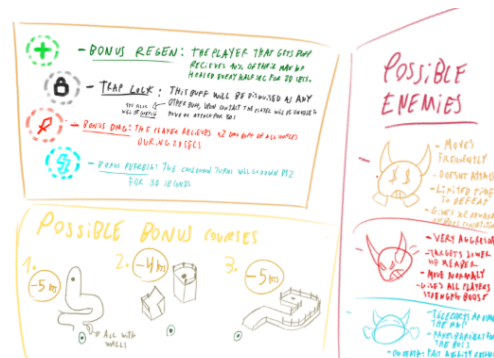

Playground

First and foremost, to talk about the mechanics that will appear in the game, we need to have a physical space at least to visualize a way that these would be implemented and in which zones in particular. Next to this paragraph, I tried to draw a visual concept of an arena that could be used as a test chamber, it can also be used as a template arena for future bosses if we need via tweaking parts of the design, but overall i think the idea of the zone is visualized good enough. I preferred to use a symmetrical design to be simple enough to work as a playground for testing of the functions and every mechanic that i will further look into in later pages on the document.

Further clarifications:

- **Main Boss Zone** is where the base boss would spawn and stay if not needed to move that much, think of it as a base waypoint of the boss to go when it's doing nothing or want to test collisions
- **Bonus Golf Zone** refers to a minigame that will happen periodically (every 5 minutes) and will disappear at 45s, the course will have a forcefield (dark blue) that you will not be able to break and bounce if you collide with it, you can enter it via the cyan opening which would be a small opening to enter around 1 semicircle. When a player enters the course, it will be teleported to the start of the course, from there you'll have a limited amount of shots to complete the course (generally 5)
- **Obstacles** are not defined since i need to ask generally what props we should use as general encounter, however in general putting them around the map as a method of barrier to the player and the boss, however these props are able to move via environmental attacks from the boss or possible abilities of the mage.
- **Void** as a mechanic, health penalty everytime you fall (you have to calculate your shots quite well to make sure you don't fall off), the way of coming back similar to golf rules, plus you have to consider the boss having knockbacks attacks and positioning yourself on a zone to be able to stay on the arena or recover with your shots.
- **Bonus Pads and Special enemies** are specified on the image on the next page.

Further clarifications:

- Aside from a basic ideas of the golf arenas (the first one was made on different perspective since the whole arena was made with walls around). The number symbolizes the max hits you have upon entering the arena, if you've done more shots than it you will be damaged (1/4 of your health), if you do it on less shots, the reward is a bonus point multiplier $(2 + 0.25 * (\text{maxShots} - \text{doneShots}))$ which strengthens your higher stat (so that every role can have a reason to go for it).
- The pads is important to specify that appear randomly every 1 minute on any of the pads spawns on the map (in the hex arena case, only 4 spawns, where every power can show in any spawn), this also only works for one player, so if its a coordinated team they'll know which one each has to choose, if you're eager you might get locked and thus unutilized for 30 seconds, also if you are not compensated or a ally is being to selfish, he might also be rewarded to enhance the "party game" expression a little higher even if its a team game.
- The enemies are events that spawn on a time mark such as the golf arena (every 7 minutes) which gives a party buff when defeated, if not defeated all 3 will disappear by normal except the bonus money enemy which will disappear

The life of the enemies makes them more like minibosses that will wander around the map and propose specific threats that make the arena more vivid, instead of waiting in their spawn to be defeated.

Full detailed proposal of the base arena⁴⁹

⁴⁹ In Appendix Folder: 03-10-24ProposalOfBaseArenaExplained1,2,3,4,5.png

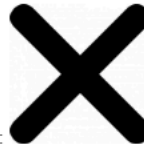

I was drafting ideas to make a representative design for a teleport button or something like that in the floor but i've noticed That even if we did something similar to it, it wouldn't be visually noticeable for the players (given the camera we have).

I think what we should strive to model should be a similar approach to Portal's Portals, just having the same form of them but since our portals are one way, I would differentiate the entry portal with the exit portal:

- The entry portal should be of a color/ color glow **green** tending to be phosphorescent type of green so the portal could be differentiated from far away and in the center a symbol referring to the state of the portal:

- A circle if the portal is active (that is, a player can enter the portal):
- A cross if the portal is inactive (on cooldown), as a note, i would make the glow of the portal a little more greyish or without that much strength as when

is active so its easily noted from far away:

- The exit portal should be of a **red** tending to grey (such as when the entry portal is inactive) color and should **have** always the cross symbol referring to the state when you cannot enter that specific portal.
- The visual effects of the portal could have small particles of the same color around them floating in the air, but overall what I want is that when you enter a portal you have a small transition fading white in and white out from **entering portal** and leasing through the other.
- Referring to the **sound effect** of activating the portal, i would say that some similar to a buzz of a **motor cycle** (very high-speed sounds) or similar other portal sounds could work, references: <https://youtu.be/y9LJk1qUWYI?si=LwBYFKLf01BixFuW>, <https://youtu.be/ZVMXBe8mpQ4?si=k9h1hDEJi-1SocKa>, https://youtu.be/zGDpd8u5_2o?si=T627DRwEXiZ_9R1J, <https://youtu.be/n3zeHYiO7pM?si=agbHcKaRKZQibcS1>
- Visual reference of portal:

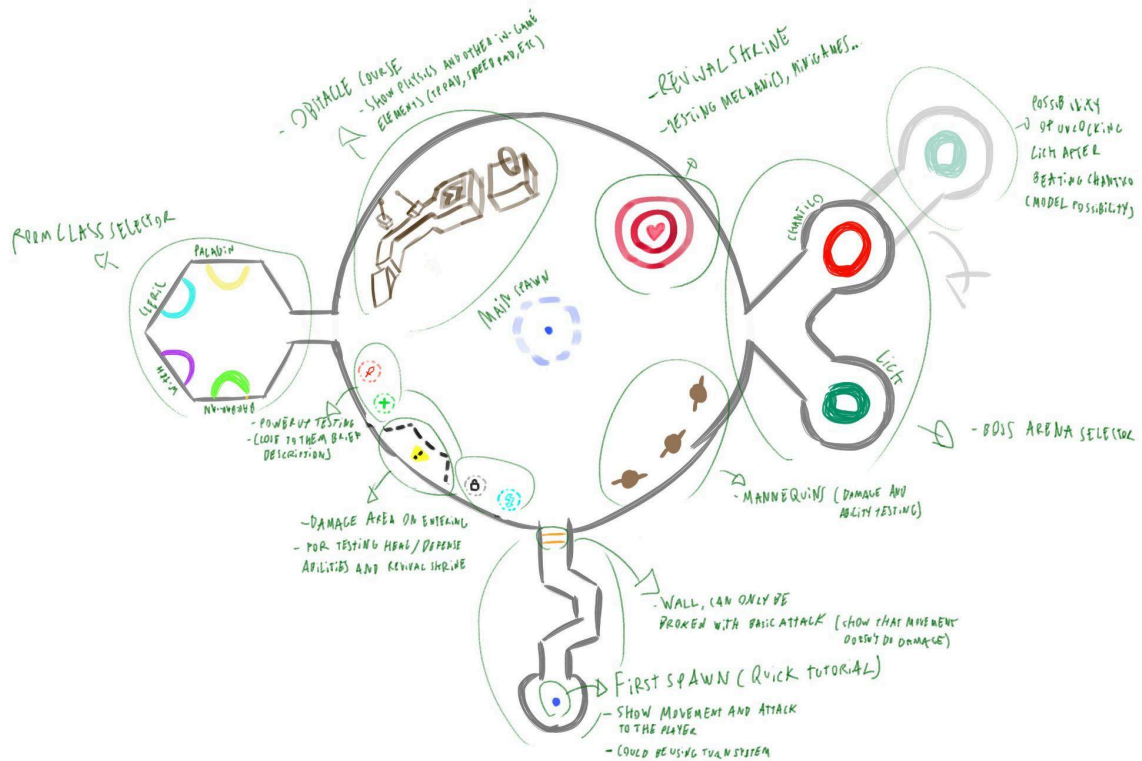

- (I wouldnt make them See through, just in the center a bit white-ish color, spiral texture)

Initial Lobby Idea That Served as a Tutorial and a Warm-Up multiplayer zone, discarded for time reasons⁵¹

⁵¹ In Appendix Folder: 05-12-24InitialIdeaOfTheLobbyDistribution.png

A1

“The student produces design requirements for a challenge in a structured way, proposes solutions based on these, and evaluates these solutions taking different perspectives into account. “

- **Daily Standups** are inherently excessive, we cannot say that every day of every week we will do something for the project, even then, the Daily Standups, while noted in the cooperation Agreement, they are not necessarily described to be imparted, which then you ask the question why the definition was written on the first place.
- **Weekly Trello Checks** on our group at least are done on **Thursday**, unless strictly necessary. I think we shouldn't change this day to maintain a logical workflow of one mini-sprint each week, **not** considering also checking it on **Monday**.
- **What if the department lead is an accuser in a strike?**
- The member should be allowed to keep his work as his proprietary rights **after** the game is created and published, and then, the member should be allowed to be the sole proprietary or priority proprietary of the work done, this is concerning the *“Any ideas, assets, code, or writing created by a company member while working on the project belongs to the company.”* We have to consider that, from the 84 people working in the company, at least 6 that i know are erasmus and others surely will have a **difficult time adhering to the company after this project**, we cannot expect for the company to take concepts or work that could be reused or reimagined for other projects by the group members that done it.
- **Drafts and not accepted ideas that will not be present in the final project shouldn't belong to the company.** The reasoning being the same as the previous message, we cannot expect for the company to keep every member working and even if they do, they are working in the company as a learning experience of a company, but not a legally built company overall, we shouldn't be able to coerce the singular improvements and developments of other members that aren't even used in the project.
- **Nature of Relationship.** *“Independent contractors. The Parties are independent contractors. Nothing in this Agreement shall be deemed to constitute a partnership or joint venture between the Parties or constitute any Party to be the agent of the other Party for any purpose. Nothing in this agreement is intended or is to be deemed to create a partnership or joint venture between the parties”.* While this doesn't mean that you are not able to, the reasoning I'm **proposing this** as a rule in the company is the same as the above, on a higher note we are aiming to pass the Minor, not to create a company of 84 people, or bounding personal work to complicated territory.
- **No waiver.** *“No waiver or modification of any of the terms of this agreement will be valid unless in writing. No waiver by either party of a breach hereof or default hereunder will be deemed a waiver by such party of any subsequent breach or default.”* So we are **sure** that the only things the company expects from us (including the specific departments agreement) is the things that are written down and not the ones discussed but not made effective in scrum meetings, scrum of scrums, lead meetings or discussions with the CEO.
- **Bare minimum discourse** *“In a proposal of a strike enforcement into a member of the company, the accuser should at least give proofs of trying to communicate beforehand about the problem with the defendant and the latter not being able to respond or vaguely avoid their problem with the span of communication limit established in the agreement”.* This makes the strikes more reasonable as you cannot expect any other member to do specific tasks that you want them to do at specific times unless you've agreed with them via text or having some factual proof of doing it. The communication limit is the one established being *“Members can be*

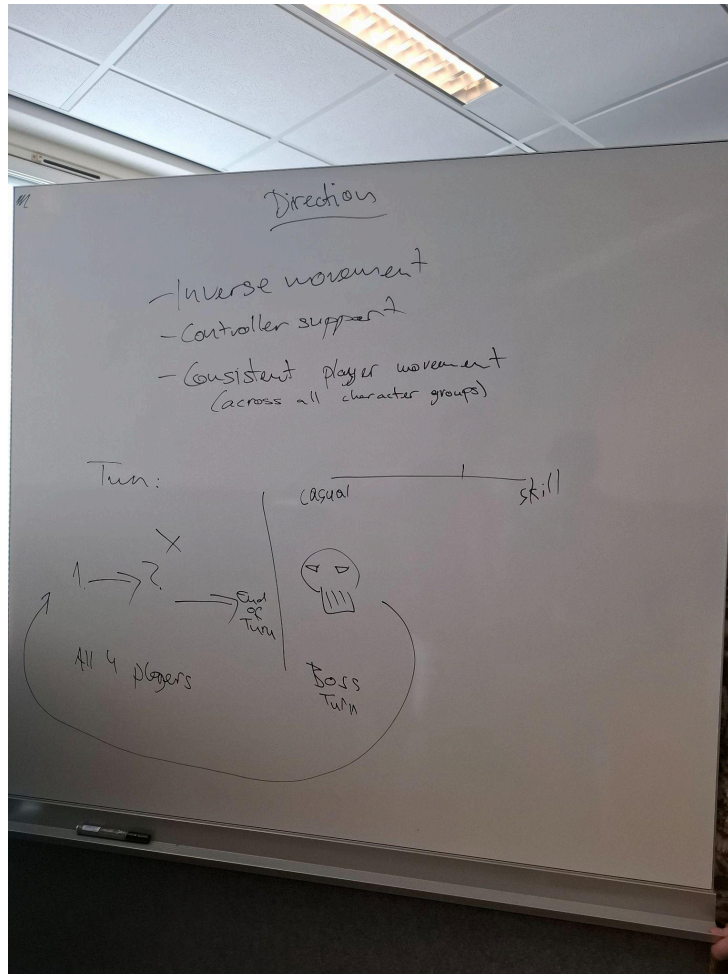

contacted at any time, but are not required to answer outside of work hours (8.00-17.00), on weekends, and holidays.” and within 24 hours of limit, proposed in the note: “Discord will be the main source used for communication. If something is written in discord, it's considered seen by everyone after 1 working day, homework, or other valuable information.”

- The company may use the material done by the employees **only** for the development and **publish** of the game and their promotional and marketing material.

Proposals that I had that I presented with my scrum team about the Cooperation Agreement.⁵²

When the Cooperation Agreement was made public there was a lot of points that i wasn't totally agreeing with, generally to how was the product going to be published and the rights of who has x property of x asset, but overall there was a very compromised schedule, specifically about being able to work constantly in x days that i think it was counterproductive for what the project was more open to work with your level and time and communicating with others in some days, what I noticed is that it felt that the Agreement was proposed as if this was our main occupation which i think it was a big assumption.

⁵² In Appendix Folder: 10-10-24CooperationAgreementProposals1,2.png

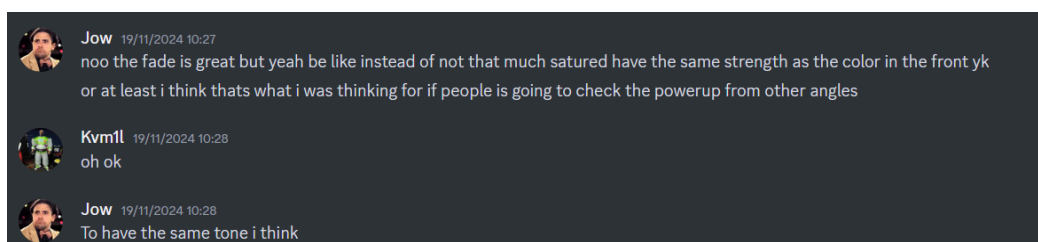

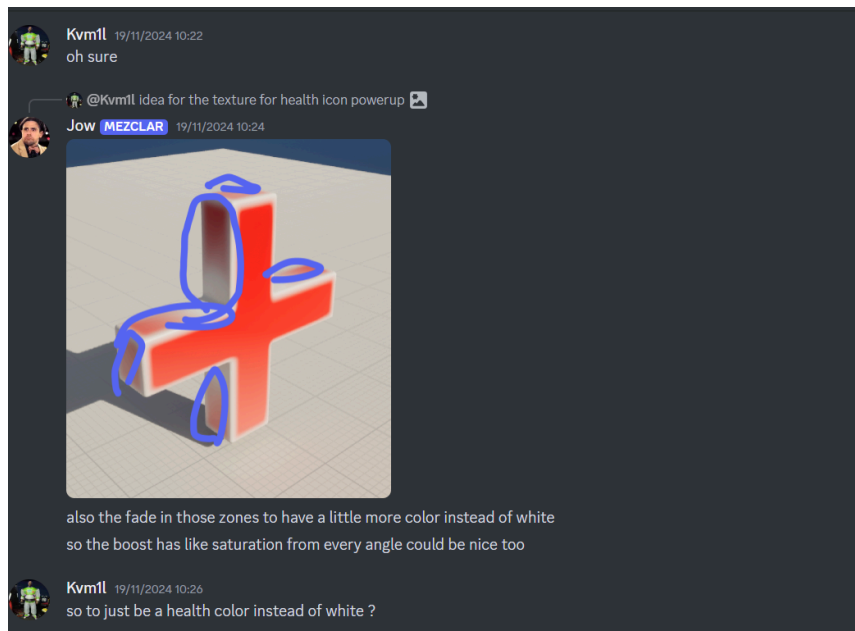

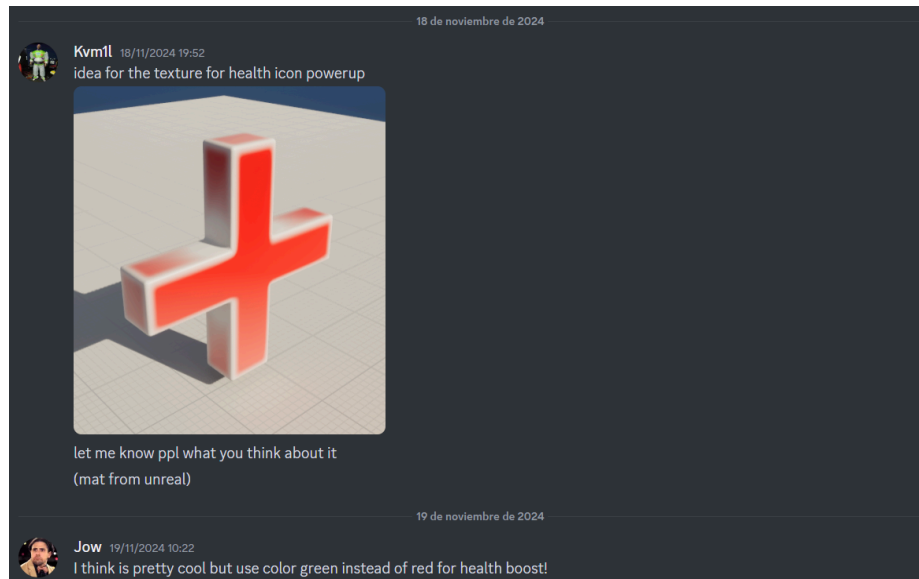

Joel Aguilera Molina 10 oct 2024, 9:42

Done last thursday, specifics of the meeting was to clarify the overall idea that Mika had with the game mechanics, for my part this week Mika ensured that the boost packs should be used around the maps, independent of the boss.

😊 • Editar • Eliminar

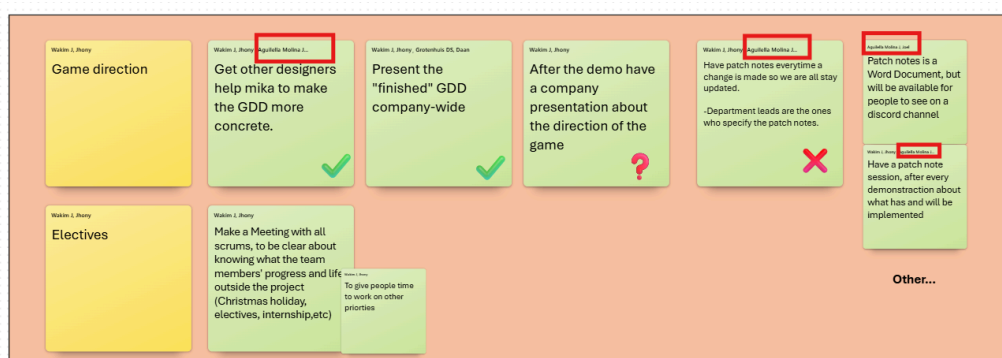

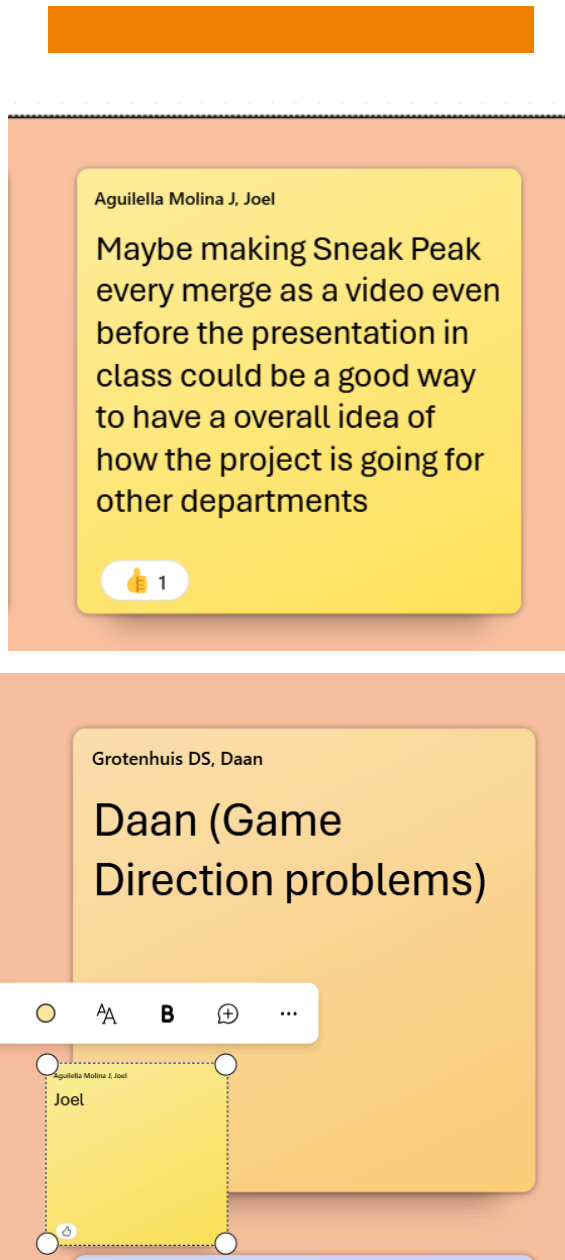

Meeting with Mika to specify between both general mechanics, specifically the Power Ups and how they were implemented in the game⁵³

Paper Prototype Testing⁵⁶

Overall it wasn't my direct idea, it was from Michele, designer of the Mage Team, but I played a role as a gamemaster of the first test and added the Revival Shrine Mechanic that wasn't proposed originally, activating on hit when a player hits the shrine every 5 turns.

⁵⁶ In Appendix Folder: 06-12-24PaperPrototypeTest.png

13 de enero de 2025

Kvml1 13/01/2025 17:42
actuallyl i was thinking about the models (editado)
and then i thought
why not keep the idea of having those glyphs with emission
instead of just blank color with a star
in the middle
what do you think about that?

Jow 13/01/2025 17:44
@Kvml1 what do you think about that?
i think its a good idea

Kvml1 13/01/2025 17:44
because the teleport is already in that theme

Jow 13/01/2025 17:44
yeah and you would see the difference
sure, if you do it on time no problem!

Kvml1 13/01/2025 17:45
but idk if i should do the glyphs with emmission or just normal color

Jow 13/01/2025 17:45
i presonally
would say normal color cause the light in the other arenas vary a lot

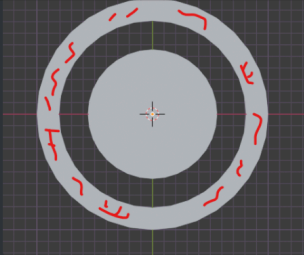

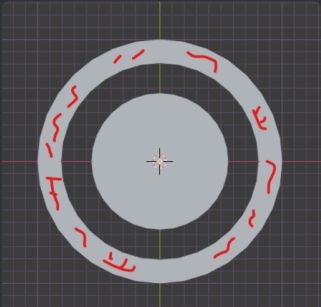

Kvml1 13/01/2025 17:45
because the idea is the same as the previous one
just the cirlice inside will have emissive color

Jow 13/01/2025 17:46
mhm

Kvml1 13/01/2025 17:46
and then the surrounding the normal color with glyphs

Jow 13/01/2025 17:47
yeee i see it

Kvml1 13/01/2025 17:48

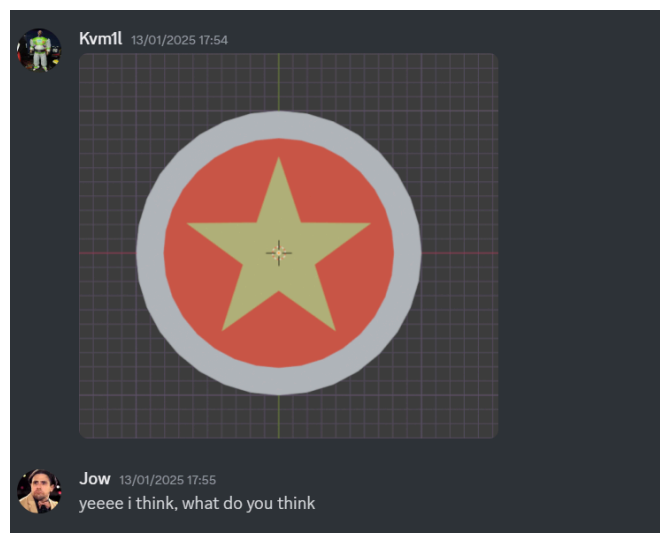

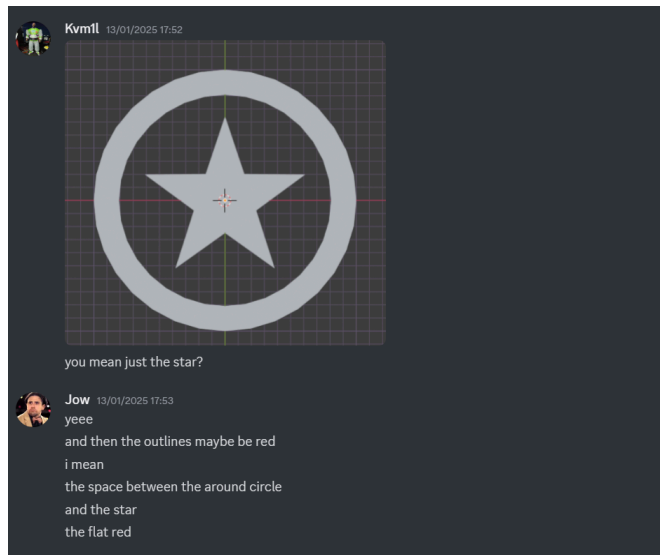

and then the middle with emmissive color?
or normal red with yellow star

Jow 13/01/2025 17:49
maybe the midde normal red yellow star
and then the yellow star with emissive

Kvml1 13/01/2025 17:49
sure
and the around thingy with a rock material same as teleport?

Jow 13/01/2025 17:50
yahh i th
i think it should work fine

Kvml1 13/01/2025 17:55
jsut need to do the glyphs now
also so the height doesnt matter ?
for the ball
its automaticly gets pushed up it it touches it right?

Jow 13/01/2025 17:56
yep
exactly

Kvml1 13/01/2025 17:56
okle
thx

Jow 13/01/2025 17:56
np

Kvml1 13/01/2025 18:39
ok actually can do glyphs on this one

Jow 13/01/2025 19:10
nice

Kvml1 13/01/2025 19:10
oh sorry i meant i cant (edited)

Jow 13/01/2025 19:10
oo its ok

Kvml1 13/01/2025 19:10
trying to make the star fit the theme

Kvml1 13/01/2025 19:55

changed the idea a bit
since the previous one didnt work much
the star it yellow emmision but the substance fucks up idk why
or we keep it simple

or we keep it simple

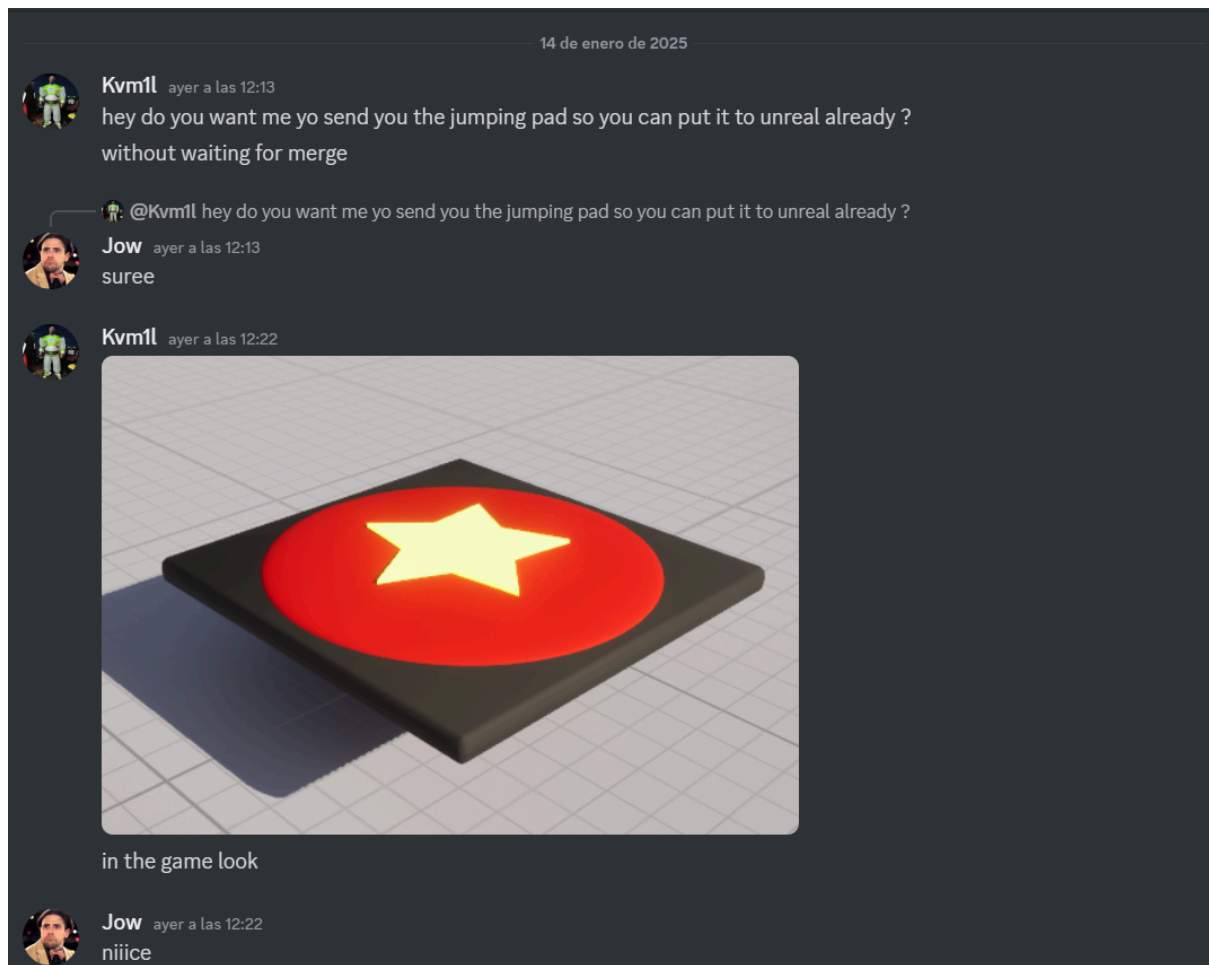

Jow 13/01/2025 19:58
yee
this also works fine

Kvml1 13/01/2025 19:59
which one do you think will fit better

Jow 13/01/2025 19:59
second i think

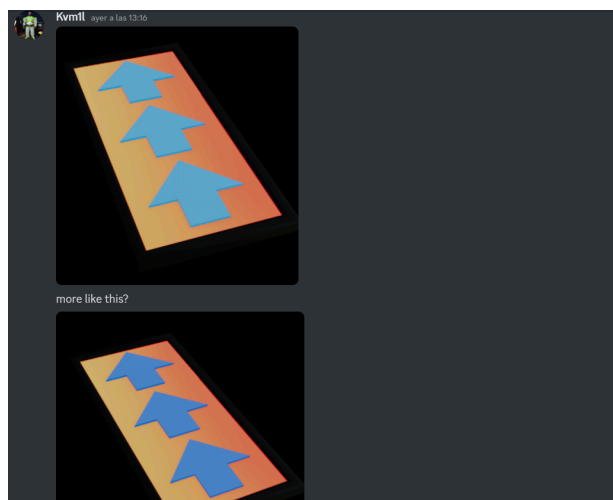

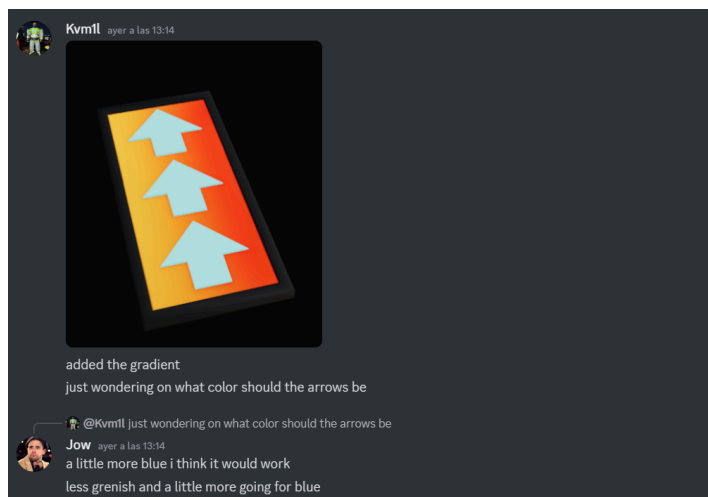

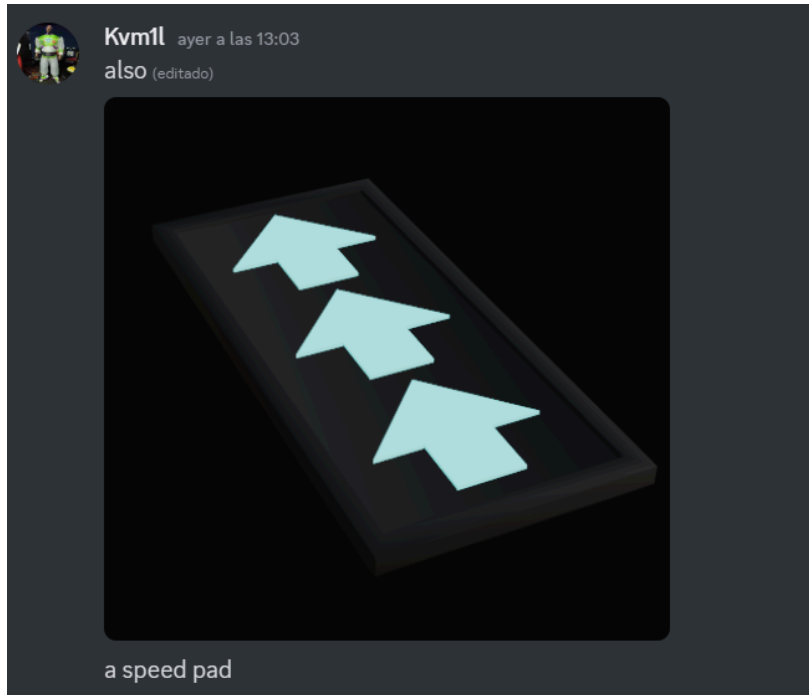

Kvml1 13/01/2025 19:59
oke

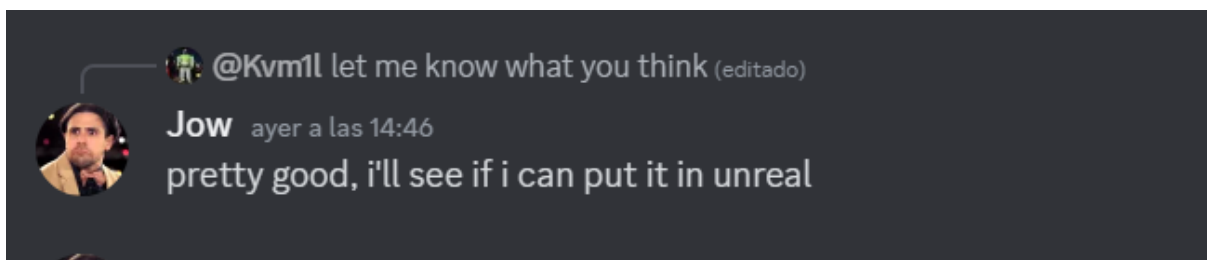

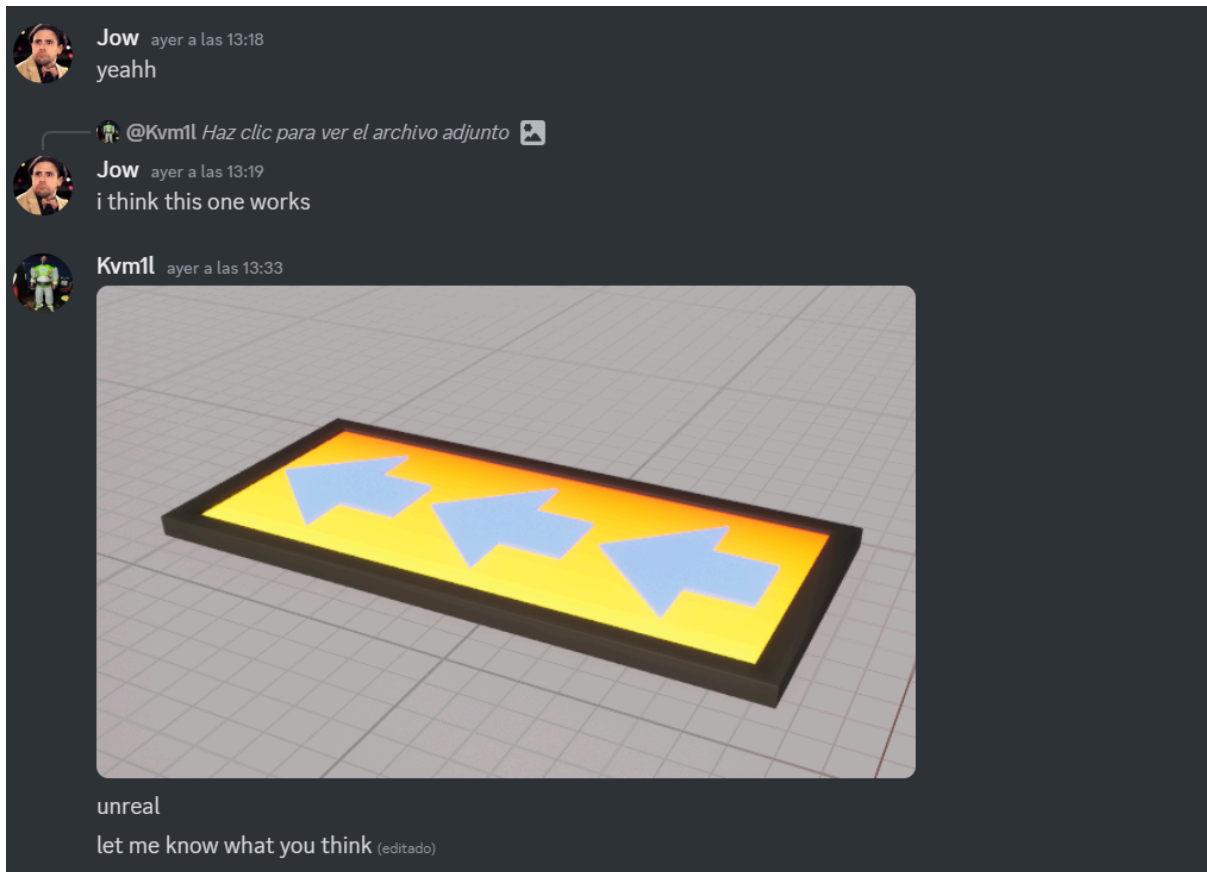

Discussion with Kamil to redesign and make the Final Jump Pad⁵⁷

Discussion on final Speed Pad design with Kamil⁵⁸

⁵⁸ In Appendix Folder: 14-01-24LittleDiscussionAboutSpeedPadLookKamil1,2,3,4,5.png

Critical Reflection

I really think this project was a really productive practice to put us in the coat of being on a big company, I more or less understood that we weren't going to have a very polished final product (at the end it's a work done from more than 70 people you don't know) but it was very useful for me to more or less understand what it would be to start a company with people you don't know and also with the English language, that as I mentioned it was an experience I didn't have before.

Thinking critically against my performance, I feel that the role of the Designer was aimed more to start up designing the levels at the instant or applying the edits in the Unreal Project as soon as possible, however I did not have any urgency since I wasn't working directly on the encounters or anything and the lobby was something that was presented without me knowing, but even so I should've had more initiative and proposed Mika to start the lobby as soon as possible.

About my communication I feel I've been very active and very insistent in the things I wanted to be done, specifically in the last 2 sprints I've been working a lot on fluid communication and working with other people online but even then working with more than 50 people is a problem in itself so we had to cut some content and part of it was the lobby, which I think is fair because the final product feels like a stable base and maybe with the simple lobby that I put it would contrast some even if it's a test room to play with your powers.

Overall this was a very useful project and I feel that I learned a lot about team management and teamwork in this bigger scale, and also accepting that you have to work on your scope and don't try to work around something that isn't in your reach, just focus on your part.

Thanks for the experience!
