

TETRAAS

PEAK

- PITCH DECK -

Joel Aguilera Molina

SUMMARY

- **Tetras Peak** is a Tetris-like game where instead of trying to make lines and keep the pieces without overflowing the screen, you need to build the highest tower possible, where each screen is some height where a buff or debuff applies or even a **boss** may appear, will you be able to build the highest tower?

PROBLEM/OPPORTUNITY

- Tetris is one of the biggest videogames of all time, it also is one of the oldest to keep that title (1985 is the first version of Tetris).
- People love tetris, principally for his simplicity, however the formula dries up for some of the lovers of the series.
- Players that like to change and try new versions of it often are young adults between the 18-24 years mark, which is also the biggest part of the target audience of tetris itself. This will also be our main target audience.

SOLUTION

- People also would like to have interesting and original tetris games on android, where it feels that there's a market that could be exploited with a more original product
- **Solution:** Our game, while having a first version on PC, will be featured first as a **mobile game**, which we'll make it work to be comfortable to play and with mechanics and with solid marketing and monetization strategies trying to be as non-invasive as possible.

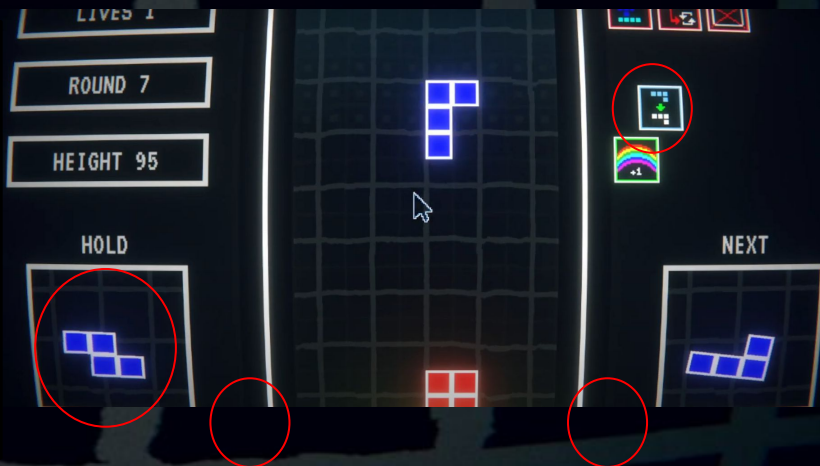

Hanze

- Joel Aguillella Molina

CHOICE OF PLATFORM

- Tetras Peak will be launched for the Apple Store and Play Store as a free game.
- The Mobile controls will be similar to other Tetris Mobile games for moving left to right (swiping piece right and left) but for the other controls there will be 4 more buttons in the screen that will be able to interact with in the game.

- **Lock:** Which Makes Instantly fall a piece, will be in the position marked in the bottom-right left circle
- **Hold:** By pressing the Hold Square
- **Rotate:** Will be situated in the bottom-left circle
- **Active:** By touching the Active Icon
 - All of this will generate a swift and intuitive system that will heighten the interest of the players to keep playing.

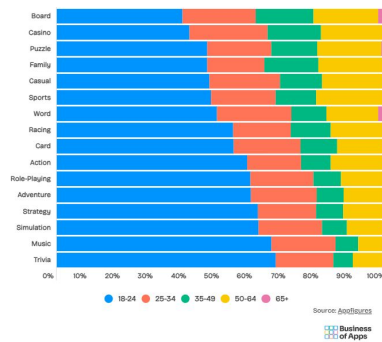

MARKET SIZE

- This 2024 Around 92% of the target audience played mobile games, from them, less than half played Puzzle games, but Strategy and Casual were around 60% of the target audience, where Tetras Tower goes for a more Casual and Strategy (considering the buffs and debuffs) based approach.

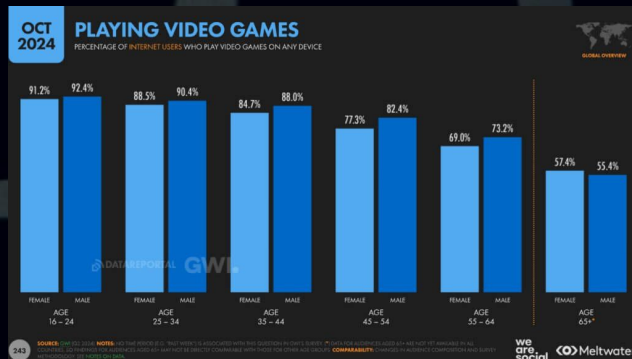

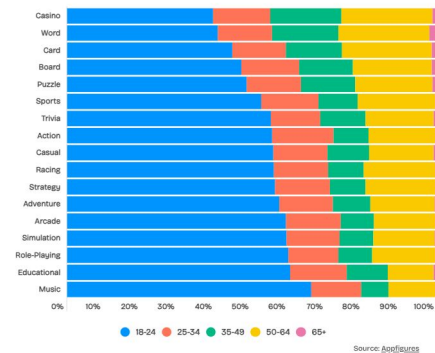

Mobile Game Age Demographics by Category

Puzzle, word and board games tend to be played by older gamers, while music, trivia and educational games have the highest percentage of 18-24 year old users.

iOS mobile game age demographics by category 2024 (%)

Android game age demographics by category 2024 (%)

MARKET SIZE

- In these statistics we can see that Puzzle games have the third most gross revenue models in the mobile game market, the strategy is obviously mixed with battle strategy (as can be seen in the top game subgenres), however a detail to note is that Match 3 puzzles are very high rewarded, which is a similar style to the Tetris concept.

Mobile Game Revenue by Genre

SensorTower reports the following top mobile game genres worldwide by gross revenue:

- RPG: \$20.2 billion
- Strategy: \$16.3 billion
- Puzzle: \$9.1 billion
- Casino: \$8 billion
- Shooter: \$4.6 billion
- Simulation: \$4.5 billion
- Action: \$4.5 billion
- Sports: \$2.7 billion
- Arcade: \$2.1 billion
- Tabletop: \$1.7 billion

Notably, RPG and strategy games, classified as mid-core genres, dominate in terms of revenue, with casual genres like puzzle also ranking high in financial performance.

Top Mobile Game Genres by Consumer Spend

[data.ai](#) provides insights into the leading mobile game genres by consumer spend (in-app purchase spend) in the US:

- RPG: \$24.5 billion
- Strategy: \$10.7 billion
- Match: \$10.2 billion
- Casino: \$8.3 billion
- Simulation: \$7.7 billion
- Action: \$4.7 billion
- Shooting: \$3.8 billion
- Party: \$3.3 billion

Additionally, the top game subgenres by consumer spend include:

- 4x march battle strategy
- MMORPG
- Team battle RPG
- Casino slots
- Match-3 puzzles with meta-layers
- Match 3 puzzles
- Action MOBA
- Idle RPG
- Luck battle
- Battle Royale

These statistics underscore the diverse preferences and substantial financial contributions of various mobile game genres in the global market.

MONETIZATION MODEL

- Tetras Peak will primarily be a **FREEMIUM**, this is a free game with in-app purchases, these are the following:
- One more Life every Death per ad (optional, 1 per run, unskippable.)
- Banner ad for each time you are selecting a debuff/buff
- On death skippable ad.
- Unskippable Ad for making at the start of the game (10 screens) the pieces fall 20% slower.
- The effect is always only when you are already finishing the level or you are wanting a revive (maybe because you died very far). The death add works because you will probably be a little exhausted so you probably will be open to see a little of the add). Banner ad can distract on buffs but you can also ignore it.

MONETIZATION MODEL

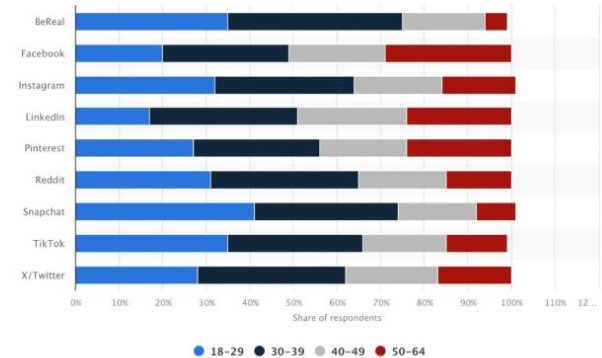

- In app purchases:
- 50 Cents → Starter Boost: Max health 3 to 4
- 50 Cents → Double Buffs!
- 30 Cents → Your next game with slower piece speed (25% slower)
- 4 Euros → Remove ads for a week!
- **PREMIUM VERSION:**
- One-Time payment: 15 Euros for no ads, all power ups activate when you want, permanently.

MARKETING MODEL

- **Trailers of the game and ads:** Youtube,X, Tik Tok, Reddit.
- Used as Adds In-Game for other **Mobile Games** (Skippable and Unskippable)
- **Playable Ads:** Easier to understand version of the game with 3 screens (stops at a boss) to showcase the overall game loop of the game, which is the most attractive part of it thanks to its visual effects and swift vibe.

- 18-29 years – Snapchat (41%), TikTok (35%), Instagram (32%)
- 30-39 years – LinkedIn (34%), X/Twitter (34%), Snapchat (33%), Instagram (32%)
- 40-49 years – LinkedIn (25%), Facebook (22%), X/Twitter (21%)
- 50-59 years – Facebook (29%), LinkedIn (24%), Pinterest (24%)

- **Streamers or Influencers:** Interested or dedicated to the Tetris Community

TRACTION

- **Quests:** To keep the retention going via making players reach high levels in order to give them skins or temporal boosts mentioned.
- **Achievements:** For completionists and to give an encouragement to challenge yourself in doing specific things, such as reaching to x height without rotating a piece.
- **Skins:** After completing x quest or getting y achievement, also able to be bought.
- **Unlockable Content:** New Buffs and Debuffs that spawn after completing some quest in the buff and debuff pool.
- **Friend and Global leaderboard:** To see high scores and compete with other players around the world or with your friends.
- **Events and Updates:** For new skins, new quests, new mechanics
- **Daily Challenge:** Starts at a higher floor with some specific debuffs, leaderboard for

TEAM

- We are a group of 5 people with Junior level, so we don't expect to cover that much of the budget, things to note is that I am the one in the back and will mainly taking place on concepting and marketing, Ivan Safon, the one on my right is the Artist Lead, and Raul Cano, the one on my left is the Programmer lead, the other team members work in all places except marketing.

- I put 22\$ per worker, working 6h a day monday to friday, hence the budget will be seen in the financials

COMPETITION

- Techmino: Sever 99 multiplayer in mobile with very high reward from its fanbase for its quality, but it lacks of that much original

- 99 Bricks Wizard Academy: 2.99\$ Game, Similar to Tetras Peak in the sense of reaching the highest tower but with gravity features and pvp elements that differentiate between a single player experience.

FINANTIALS

- Business Planning: The idea is to rely specifically on the in-game sales, so the game stays afloat also by respecting and hearing our community:

- We ask then for a budget of 75.000€ to start working with the product

APPENDIX

GAME FLOW ANALYSIS

- Tetras Peak focuses on a simple infinite-kind loop where the Player is in one of these states:
- Main Menu: Where the player can look for skins, instructions, quests, events, etc.
- Power Up Chooser: If you have one power up to choose from if they bought a power up or they got from a quest.
- In-Game Screen: Where the player is playing Tetras Peak, placing pieces to get to the highest part of the screen.
- Buff Selection: Where the player chooses either buff, debuff, or is presented with a boss,
- End Game Screen: Where the player has died and can consult his high score, a revive or go back to menu.

GAME FLOW ANALYSIS

- In the Main Menu it's a good place to give players moments to relax since they have to see what options they have to choose or are there after a game, up in the left is the PREMIUM option to buy, but other than that, I prefer not to interfere with the player experience with ads except up in the right where there will be a **Changelog** for events or other skins and quests updated and also using it as a selling point to see what skins you could get.
- In the Power Up Menu you always have the chance to buy the power ups because you are not forced and can skip this screen directly, but for other players that still want a help putting the Power Up Menu when starting a game it's the most reasonable.
- In the In-Game screen itself I didn't put any kind of ads or modifications that aren't already chosen from the Power Up Menu because it's the point where the players are preoccupied on not wasting or having troubles seeing or difficulting the experience and the

GAME FLOW ANALYSIS

- In the buff selection there is a banner ad down in the middle that doesn't directly affect the player but given the black background it will be easy to spot and watch indirectly since there are a lot of ads that have very strong colors for seeing, also in the game itself banner ads do not stop or annoy the gameplay itself.
- End Game Screen is where the ads come in, first of all it feels like a resting point from the stress or activity of the game that requires you to keep your buffs debuffs in check and being quick by going up, so it's more likely that players won't directly skip these adds, furthermore the revival per unskippable ad is made because it is fair to the players to only have one more chance than infinite if after the add you could just revive with money, which would also break the competitive nature of getting the highest possible in the tower.

- For Tetras Peak I aimed the marketing campaign a lot on mobile game ads and influencers because i've been watching that a lot of players simply check a game if the concept is innovative and original, and one of the thing Tetras Tower has a strength is the visual and mental appeal of "Reverse Tetris with Roguelike elements".

MARKETING AND MONETIZATION

- That being said i also have to say that the main problem that it has is one of the strengths of the game, it's short to learn, hard to master but with very few changing elements as long as you move through the game, which is one of the reasons why I specify in a lot of ads and playable ads to give a watch the player of three or four screens, not necessarily in the start but short and sweet elements that makes the player want to see the original game. And generally I also prepared a campaign with streamers and influencers because generally it's a very easy to understand game and with few mental tricks that make you want to try it yourself right of the bat, since its based on a concept that we all already know but you see the changes that basically flip upside-down the way you think about playing tetris itself.

MARKETING AND MONETIZATION

- As for the monetization aspect, If i had to choose a revenue model it had to be Freemium to compete with all the other tetris-like games that I'm competing against, specially 99 Bricks Wizard Academy is a paid game and has a lot of similarities in the concept of playing as a Tetris but with very different goals and game cycle. However i know that the freemium aspect will make the players on the community not as respectful or as loyal as it could be a paid game because having one pay makes the player mentally "have to invest hours" on it, whereas players of my game if they have bad games and enter again and see that they have to skip again the Power Up Selector that is like "mocking them for not being too good" to do a quest or whatever might have the reputation of the game as a whole downed to a "mobile game", it's true that the premium version exists but after all it's prepared for players that have money to spend and are invested on the game, rather than the main target audience, which is 18-24, that might have other budget or mentally doesn't want to pay for a free game.
